4. The present Decision shall take effect thirty calendar days after its official publication.

Chairman V.B. Khristenko

CHANGES

in Chapter II of the Uniform Sanitary and Epidemiological and Hygienic Requirements for Goods Subject To Sanitary and Epidemiological Supervision (Control)

1. In section 1, "Requirements for safety and nutritional value of foods":

1.1. Fourth paragraph of item 18 to supplement with the following sentence: "It is not permitted for the consumer packaging (labels) and / or regulations (recommendations) on the use of biologically active food additives to include an indication of medical conditions, as well as the claim that biologically active food additives have medicinal properties";

1.2. In item 55:

1.2.1. Sixth paragraph shall read as follows: "The content of biologically active substances in biologically active food additives based on vegetable raw materials, for which no adequate and ceiling tolerable intake levels are established in Annex 5, should be no less than 10% biologically active food additives containing such biologically active substances, at least 15% for biologically active food additives that are sources of such biologically active substances, and should not exceed 50% of the value of a single therapeutic dose, defined for the use of these substances as traditional medicines. The content of medicinal vegetable raw materials in a daily dose of biologically active food additives should not be less than 10 percent and should not exceed 50 percent of the value of a single therapeutic dose, defined for the application of this raw material as traditional medicines";

1.2.2. To add the following paragraphs to read as follows: "The information on the availability and amount of biologically active substances in biologically active food additives, the scientific justification for their application and the amount of biologically active substances is justified and is provided by the manufacturer (developer of technical documents) on the basis of the analytical methods of research and / or using a calculation method taking into account the formulation of the biologically active food additive, and data on the composition of raw materials. The manufacturer (developer of technical documents) shall provide materials on quantitative methods, allowing confirmation of authenticity of ingredients (components) included in the formulation, and determination of quantities of the food and biologically active substances (major active groups of compounds or individual substances) in products.

Determination of the actual content of biologically active substances is carried out in the presence of methods, duly approved by the national legislation of Customs Union member-states. In other cases, examination of the content of biologically active substances is carried out on the basis of documents of the manufacturer (certificate of compliance, test report, a description of the method used, etc.), by way of analysis confirming the qualitative or quantitative presence of biologically active substances in specialized food products and biologically active food additives";
