Fish and Seafood Market in Latvia.

Report Categories:

Fishery Products

Approved By:

Russ Nicely, Agricultural Attaché

Prepared By:

Piotr Rucinski, Agricultural Specialist

Report Highlights:

For 2015 the total Latvian fish catch was 32 percent lower than in 2014 and amounted to 83,000 MT. In 2015 a higher catch in the Baltic Sea did not offset reduced catch in long-distance fisheries. Half of the Latvian fish processing industry processes fish harvested in the Baltic Sea and Gulf of Riga and the remaining half processes fish originating from the long-distance ocean catch and imports. Latvia has 100 fish processing plants producing for the domestic and export markets. In 2015 average annual fish consumption in Latvia amounted to 11.3 kilograms. Latvia imports mainly raw fish which is used by the local industry for further processing.

General Information:

Production

Fishing sector

In 2015 the total fish catch was 83,000 MT which included the Baltic Sea, long-distance ocean fisheries and inland catch. The fish catch in 2015 was 32 percent lower than in 2014 because of reduced catch in long-distance ocean fisheries. The total amount of catch for the long-distance fisheries amounted to 20,000 MT, a 66 percent decrease compared to 2014. The main deep sea activity areas were the Central Atlantic region (CECAF) in Mauritanian (EEZ) waters. A relatively small portion of the catch is made from fishing activities in the North Atlantic in the NAFO and NEAFC convention areas, where Latvia has fishing quotas for shrimp, redfish and mackerel.

Fish catch by fishing ground (000 MT)

	2010	2011	2012	2013	2014	2015
Baltic Sea and Gulf of Riga	74	64	58	61	60	62
Atlantic	90	92	32	55	59	20
Inland	1	1	1	1	1	1

Source: Statistical Office

Pelagic species (herring and sprats) are the mainstay of the Latvian harvests accounting for almost 90 percent of the total fish catch in Baltic Sea and the Gulf of Riga. Fishing activities vary from year to year because they depend on fish feeding conditions, water temperature and level of water pollution.

The annual Baltic Sea fishing quota is negotiated on an annual basis by the EU's agriculture and fisheries ministers. The International Council for the Exploration of the Sea (ICES) is a global organization that uses science to develop advice to support sustainable use of the oceans. ICES recommends to the Council the size of quotas for the next year. In October 2015 the Council of Ministers agreed on a 20 percent reduction of the 2016 quotas for cod compared to 2015, resulting in a total allowable catch (TAC) of maximum 41,143 MT for the Eastern stock and 12,720 MT for the Western stock of the Baltic Sea. The 2016 quotas for sprat were lowered by 5 percent compared to 2015, to a TAC of maximum 202,320 MT.

In 2015 the total catch in both the Baltic Sea and the Gulf of Riga amounted to 62,000 MT, an increase of 3 percent compared to 2014. The main species caught were Baltic sprat, Baltic herring and cod.

Fish catch (000 MT)

	2010	2011	2012	2013	2014	2015
Total fish catch	164	165	90	117	120	82

Cod	5	5	4	3	2	3
Other fish	92	94	35	60	64	20
Crustaceans and molluscs	1	0	1	1	0	4

Source: Statistical Office

In 2015 the Latvian fishing fleet consisted of more than 700 fishing vessels. Out of this number, 628 were the vessels used for coastal fishing, 68 for Baltic Sea offshore fishing and seven for long-distance ocean fishing. The majority of fishing vessels used for coastal fishing are less than five meters long. The fishing fleet operating beyond coastal waters decreased over the past few years due to a scrapping program by the EU. The program reduces the fishing capacity in response to the depleted fish stocks.

Catches in the Baltic Sea offshore fisheries constitute 50 percent of the total Latvian fishing fleet catch. The main species harvested by the offshore fishermen are cod, herring and sprat. Latvia has seven high seas fishing vessels operating in the Central Atlantic region, Mauritania and Morocco waters. In 2015 the high seas catches in the North and Northeast Atlantic amounted to 20,000 MT and were 66 percent lower than in 2014. Main species caught were mackerel, horse mackerel, sardinella and redfish. Fishing in inland waters has significantly decreased within the last few years mainly due to the prohibition of fishing with nets and traps in numerous lakes and rivers. In addition, demand for fresh water fish from the processing industry is low. The main species harvested are bream, pike and river lamprey.

Processing

The fish processing industry is well-developed. It is one of the largest food production sectors in Latvia. In 2015 the industry employed approximately 5,800 people. The processing facilities are located mainly along Latvia's coastline. Latvian fish processing companies produce both for the domestic and the export market. The main types of fishery products made in Latvia are frozen fish, salted and smoked fish, unsterilized preserves, ready to serve products, and sterilized canned fish.

Canned fish producers mainly use raw materials from the Baltic Sea. In addition, the fish processors also use marine fish such as Atlantic herring, mackerel, sardine and sardinella. Freshwater fish species (pike, catfish, common carp and others) are used in small quantities.

In 2015 the overall output of the Latvian fish processing industry amounted to 80,082 MT, worth U.S. \$153 million. There are 100 processing plants including large scale canneries eligible for export to the European Union and several family run companies, permitted to sell products only to regional markets - these are e.g. small processing plants next to fisheries.

Output and value of Fish Processing Industry (000MT, U.S. \$)

	2013		2014		2015	
	Volume	Value	Volume	Value	Volume	Value
Frozen whole salt water fish	22,687	14,537	17,493	11,327	19,023	10,814

Source: Statistical Office of Latvia, 2015

One of the largest fish processing plants, “Kaija”, is located in Riga. The plant specializes in production of canned sprats and mackerel. Daily production is 120,000 cans of sprats and 50,000 cans of mackerel. The Kaija plant also processes salmon imported from the United States and tuna imported from Denmark. The company is very flexible and also offers private label production for suppliers of raw fish. Kaija produces 50 percent under their own label and the rest under the UK label “Prince” and Dutch “Sorensen”.

Aquaculture sector

Although aquaculture is developing fast in Latvia, it is still a new branch of production. Most farms are located in the interior of the country. There is no aquaculture activity in marine waters. There are 160 aquaculture farms registered in Latvia. The main species produced are carp, trout, goldfish, pike, catfish and sturgeon. It is estimated that in 2015 production of fish by the aquaculture sector amounted to 600 MT, of which carp accounted for more than 80 percent. Aquaculture factories (mainly state owned farms) also supply fry, fingerlings and smolts for release in natural waters in order to compensate for damage to fish resources caused by the development of hydropower plants on rivers, pollution of water and the degradation of natural habitats.

Consumption

In 2015 the average annual fish consumption in Latvia was 11.3 kg/per capita, 50 percent of the average per capita fish consumption in the EU.

Annual Consumption of Fish in Latvia (kilograms per capita)

	2010	2011	2012	2013	2014	2015
Fish (fresh, chilled and frozen)	6.0	6.0	6.6	6.3	5.7	6.1
Crustaceans and other seafood	0.1	0.1	0.2	0.1	0.2	0.2
Fish (dried or smoked)	1.0	1.0	1.3	1.4	1.0	1.2
Herring and other salted fish	1.6	1.3	1.1	1.1	1.0	1.1
Canned fish	2.9	2.8	2.8	3.0	2.9	2.7
Total	11.6	11.3	12	11.9	10.8	11.3

Source: Statistical Office

In 2015 fish consumption increased in comparison to 2014 mainly due to higher consumption of fresh fish. Pollock, herring, and mackerel are the most popular saltwater species, while carp, trout and panga are the most popular freshwater species. Pollock, salmon, cod, and trout are gaining popularity in the market, indicating a structural change in consumption. Consumption of Pollock is growing due to

relatively low prices compared to other fish and because of improved quality stemming from increased imports from the United States. Fish is traditionally an important part of daily diet in Latvia. There is a growing awareness among Latvian consumers regarding fish and seafood consumption. They are choosing fish products with more care and attention, are getting information about products, and are benefiting from campaigns promoting consumption and the health benefits of fish and seafood.

Distribution

Seafood is sold in stores ranging from specialized stores, supermarkets, hypermarkets, and small independent grocers. Many hypermarkets also feature extensive displays for fresh seafood products including live fish (in tanks) for purchase. Small independent grocers typically lack fresh options but instead offer processed, brand labeled options or frozen filets frequently with no brand association.

Trade

Latvia is a net exporter of fish and seafood products. The positive trade balance for fishery and seafood products in 2015 was U.S. \$22 million.

Imports

Latvia imports mainly raw fish which is used by the local industry for further processing. In 2015 Latvia imported 65,687 MT of fish and seafood for a value of U.S. \$151 million. Lithuania, Sweden and Estonia were the major suppliers of fish to Latvia in 2015. Latvia imported from these three countries almost 50 percent of total imports of fish and seafood products. In the first ten months of 2016 the volume of imports increased by seven percent due to higher imports of frozen fish from Poland.

Source: Global Trade Atlas

In 2015 imports of salmon and mackerel recovered after a drop in 2014 due to the growing demand for export of products. After a 34 percent decrease in 2015, imports of Alaska Pollock are expected to recover in 2016. In the first ten months of 2016 Alaska Pollock imports were 64 percent higher than in the same period of 2015. The higher imports stem from higher demand in the domestic market and positive perception by consumers versus the Pollock imported from China. It is expected that in 2016 a decreased domestic catch and growing demand will stimulate cod imports. In the first ten months of 2016 imports of frozen and fresh cod increased by 725 and 75 percent, respectively.

In 2015 the value of imports of fish and seafood products from the United States amounted to U.S. \$573,562, a 54 percent reduction in comparison to 2014. In the first ten months of 2016 value of imports from the U.S. increased by 127 percent because of growing shipments of caviar substitutes from fish eggs and higher imports of frozen fish livers and roes.

Exports

In 2015 Latvia exports of fish and seafood products totaled U.S. \$173 million, a 22 percent decrease in comparison to the previous year. Major destinations for Latvian exports of fish were Estonia, Lithuania and Denmark. In the first ten months of 2016 exports were down 12 percent mainly because of the 19 percent reduction of exports to Lithuania. After introduction of Russian export ban in August 2014 EU countries became the main destination for export of fish products from Latvia. In 2015 Latvia exported 53 percent of its fish products to the EU, compared to 40 percent in 2014. The main destinations in the EU were Estonia, Lithuania and Denmark. The Russian import ban indirectly affected Latvian exports to Estonia because their import demand was also driven by reduced shipments to Russia.

In 2015 thirty Latvian fish processing companies were granted permission to export fish and fish products to China. However, in the first ten months of 2016 Latvia exported only 119 MT of fish and fish products to China.

In 2015 value of Latvian exports of fish and seafood products to the United States amounted to U.S. \$2.6 million, a three percent increase in comparison to 2014. The increase of exports to the United States stemmed from higher sales of sardines. In the first ten months of 2016 exports to the U.S. decreased by 11 percent because of lower sales of mackerel and herrings.

Value of Exports of Fish and Seafood Products to the United States

Commodity	Description	Thousands of United States Dollars			% Change 2015/2014

Current Tariff for Seafood Products

Tariffs for seafood products exported to the EU range from zero to 22 percent depending on species, level of processing, and the time of year. Detailed information on seafood tariffs can be found in the official [EU Journal](#) in pages 47-69 and 134-139.

<http://eur-lex.europa.eu/LexUriServ/LexUriServ.do?uri=OJ:L:2012:304:0001:0915:EN:PDF>

Market Access

A health certificate issued by a government-approved veterinarian from the exporting country must accompany all fish shipments to Latvia. Products packed for retail sale also must bear a label in the Latvian language with the date of production clearly stated. Exporters should also check with Latvian importers regarding standards.

For guidelines regarding seafood exports to Latvia and the EU in general, information is available from the National Oceanic and Atmospheric Association, <http://www.noaa.gov/> or http://www.seafood.nmfs.noaa.gov/export/export_certification/export_certification.html

Market Entry Strategy

Trade missions coordinated through industry/export organizations as well as participation in trade shows such as the annual European Seafood Exposition in Brussels are important in gaining knowledge about the market structure, consumer preferences and building contacts with importers.

U.S. exporters of seafood products may also obtain a list of current importers by contacting the Office of Agricultural Affairs of the U.S. Embassy in Warsaw.

Trade Shows and Contact

European Seafood Exposition, Brussels, Belgium

April 25-27, 2017
