South Africa is a middle-income emerging market economy with well-developed infrastructure and a domestic food market worth $55 billion. South Africa is also the gate-way to the rest of Sub-Saharan Africa, a region with a growing middle class of upwards to a 100 million people. Products with good sales potential on the South African market include poultry meat, food preparations, sauces, and almonds.

Report Highlights:

South Africa: Food Processing Ingredients 2018

Approved By:
Laura Geller, Senior Agricultural Attaché

Prepared By:
Margaret Ntloedibe, Agricultural Marketing Specialist

Post:
Pretoria
South Africa

South Africa is a middle-income emerging market economy, with an estimated population of 57 million people (64 percent are in urban areas). South Africa’s GDP reached US $300 billion in 2017. South Africa has a well-developed agribusiness sector which plays a significant role in job creation and economic development. South Africa is the largest exporter of agricultural products in Africa. Although largely self-sufficient in agriculture, the country has opportunities for imports. In 2017, imports of agricultural products reached US $7.7 billion, an increase of 5 percent compared to 2016.

In 2017, South Africa’s imports of consumer-oriented agricultural products reached US $2.5 billion up by 20 percent from 2016. 35 percent of the imports were from the European Union.

There are over 1,800 food production companies in South Africa. However, the top ten companies are responsible for more than 80 percent of the industry’s production revenue. The industry employs 450,000 people in the subsectors of meat, fish, fruit, dairy products, grain mill products, and beverages. As a major producer and exporter of finished processed food products, South Africa’s appetite for ingredients drives demand for a wide range of products.

South African food retail sales reached US $44.8 billion in 2017. The sector is well developed and aggressively expanding into other African countries. Refer to the 2017 Retail Report guide.

Section I. Market Summary

South Africa, with its well-developed infrastructure, serves as a major producer and exporter of agricultural products in Sub-Saharan Africa. South Africa is a middle-income emerging market economy with a population of 56.5 million people, 64 percent of which live in urban areas. In 2017, South Africa’s GDP reached US $300 billion. The South African commercial agricultural sector is highly diversified and is self-sufficient in most primary foods, with the exception of wheat, rice, oilseeds, pork, and poultry products. Commercial farmers, small holder farmers, and subsistence farmers are all part of South Africa’s well-developed agribusiness sector, which plays a significant role in job creation and economic development. However, South Africa continues to offer windows of opportunities for imports. In 2017, imports of agricultural products reached US $7.7 billion, an increase of 5 percent compared to 2016.

Section II. Road Map for Market Entry

A. Entry Strategy

New U.S. exporters in this market need to fully understand the food processors’ needs and how best to meet their purchasing requirements and specifications. They should consider the following when planning to enter the market.

- South Africa has a strong domestic food processing industry, and imports food ingredients and additives from all over the world.
- Finding a local agent is a safe approach for entry into the market. Someone who knows the market well for the specific product in question, and provide guidance.
- The food processor’s purchasing policy - i.e., whether it buys directly from overseas suppliers or via local importers/agents.
- It is important to note that some companies prefer to buy through local agents that can better deal with quality problems sooner.
• The financial strength of the targeted food processor.
• U.S. exporters can contact Post, the State Regional Trade Groups (SRTGs) and the National Association of State Departments of Agriculture (NASDA) to obtain additional market entry support. Cooperators regularly organize trade missions which are often organized around trade shows or other events. See https://www.fas.usda.gov/programs.market-access-program-map/state-regional-trade-groups
• Attending trade shows in the regions to meet South Africa food processing industry players. Click on this link for Food and Beverage Trade Show events in the region.

B. Import Procedure Links

Food consignments are subject to random inspection and sampling at any point of entry into South Africa to ensure that the food products are safe and comply with local regulations. Click also on this link for more information on South Africa regulations, standards, and import requirements, which includes a list of responsible ministries for those policies. Updates on imports certificates are available on this link. Updates on sweetened beverages tax deductions can be found at this link.

C. Distribution Channels

• In South Africa’s very competitive marketplace, it is essential that U.S. exporters choose the correct agents or distributors.
• Supermarkets, independent retailers and convenience stores (attached to gas stations), and independently owned health stores remain leading food distribution channels in South Africa. These companies generally prefer to deal with local agents or distributors, rather than sourcing direct from a U.S. supplier.
• Major retailers prefer to source directly from U.S. suppliers for products to be delivered to central distribution centers, where products would be distributed to chain stores.
• South Africa’s “independent” or smaller retailers prefer to buy from large wholesalers for the distribution of food and beverage.

D. Market Structure

South Africa’s larger food processing companies prefer to source food ingredients directly from overseas suppliers (instead of using local agents) to reduce costs. There is a cost savings when buying in bulk from the overseas suppliers and better control over quality. However, smaller food processors tend to prefer to purchase from local agents to better control storage and supply.

This chart gives an overview of the usual distribution channel for imported food ingredients from U.S. exporters to food processors in South Africa.

### G. Sector Trends

The South African market mirrors similar global trends related to health, convenience, and value for money for food products.

- South Africa serves as the entry point to do business in the Sub-Saharan Africa region.
- The increasing demand for convenience food is driven by increased household income.
- Manufacturers calibrate towards private labels to capitalize on the growing demand of private label offerings.
- Fruit juice manufacturers import grape and apple juice for blending with their own fruit juices.
- South Africa food processors, canners and packers continue to offer windows of opportunities for imports of raw material not available or produced locally.
- Market research confirms that consumers expect food that is not only ready-to-eat, but is also safe, nutritious, tasty, natural, and good value for money.
- Sales of organic food are rising and retailers such as Woolworths and Pick-n-Pay stock organic products targeting the upper middle class. Products include free range chickens, vegetables, and wine.
- Kosher, halal, and goat milk products are niche markets that continue to grow.

### Section III. Competition

U.S. exports face competition from South African producers, as well as producers in the Southern African Development Community (SADC), the European Union (EU) and MERCOSUR. South Africa signed an FTA with both SADC and the European Union and a preferential trade agreement with MERCOSUR. Other exporters of intermediate agricultural products to South Africa include Swaziland (food/drink ingredients and raw cane sugar), Argentina (soybean oil cake and soybean oil), and Indonesia (palm oil and palm kernel).
Section IV: Best Products Prospects Categories

A. Products in the market which have good sales potential

Nuts: almonds, chestnuts, hazelnuts, cashew nuts, walnuts, and pistachios
Fish and seafood, especially salmon
Sauces and condiments
Distilled spirits
Sugar and sugar syrups, especially lactose and lactose syrups
Food preparations
Snack foods
Sausage casings
Poultry meats (The link provides more updates on the poultry situation in the country)
Vegetable oils
Pork meats
Bakery products

B. Products not present in significant quantities but which have good sales potential

Beef
Pulses

C. Products not present because they face significant barriers

The United States is currently working with South Africa to obtain full market access for the following products:

Egg products
Table eggs
Hatching eggs
Pork shoulder cuts
Pork Casings
Heat treated and canned meat and poultry products

Section V: Key Contacts and Further Information

A. Post
