Netherlands

Food Service - Hotel Restaurant Institutional

Dutch Food Service Report

Approved By:  
Susan Phillips

Prepared By:  
Marcel Pinckaers

Report Highlights:  
The turnover of the Dutch foodservice market in 2017 was valued at $22.4 billion, up by 4.1 percent. While sales were up in all segments, sales of home delivery saw an exceptional growth rate of 23 percent last year, driven by growing demand for convenience and flexibility. In addition, Dutch consumers want food products that are healthy, authentic and tasty. Foodservice chains from the United States are and continue to be successful on the Dutch market because they have been able to respond to changing consumer needs; more U.S. chains are now opening outlets in the Netherlands. This report furthermore presents a road map for U.S. exporters who wish to expand business in the Dutch foodservice market. U.S. food products that are innovative, convenient, tasty, healthy, and affordable have the best sales potential on the Dutch market.
Executive Summary
The Netherlands is a small country geographically, but is the perfect gateway for U.S. products into the EU due to the presence of the Port of Rotterdam, Amsterdam Schiphol Airport, the confluence of two European rivers and an excellent road and railway infrastructure. As a result, the Netherlands continues to be the second largest exporter of agricultural products in the world, after the United States.

The macroeconomic situation and key data about the Dutch economy can be found in the GAIN Exporter Guide September 20, 2017.

Imports of Consumer-Oriented Products
Products coming from other EU Member States lead Dutch imports of consumer-oriented products. In 2017, the United States was the 9th largest supplier of these products to the Netherlands with imports valued at almost $1.2 billion.

Quick Facts CY2017
Imports of Consumer-Oriented Products, total: $39.5 billion

List of Top 10 Growth Products in the Netherlands (imported from the World):
1. Wine
2. Vegetables
3. Cocoa
4. Bread, pastry, cakes
5. Bananas
6. Avocados
7. Butter
8. Food Preparations
9. Grapefruit
10. Tomatoes

Food Industry by Channels:
Food Industry $82.5 billion
Consumer-Oriented Products Imports $39.5 billion
Consumer-Oriented Products Exports $74.3 billion
Agricultural & Related Products Imports $75.2 billion
Agricultural & Related Products Exports $107.6 billion
Food Retail $42.2 billion
Food Service $22.4 billion

Top 10 Food Retailers in the Netherlands, Market Share:
1. Albert Heijn 35.3%
2. Jumbo 18.7%
3. Lidl 10.5%
4. Aldi 6.7%
5. Plus 6.4%
6. Dirk 3.8%
7. Coop 3.1%
8. Emté 2.5%
9. Deen 2.2%
10. Hoogvliet 2.1%

GDP/Population:
Population: 17.2 million
GDP: $815 billion
GDP per capita: $47,384

Strengths/Weaknesses/Opportunities/Challenges
Strengths:
U.S. consumer products that are innovative, unique or have special certification fare well in the Netherlands.

Opportunities:
There is growing demand for convenient and healthy food products at an affordable price and willingness to pay for authenticity and taste.

Weakness:
Shipping time & costs, import tariffs and EU approved product labels make U.S. products more expensive.

Threats:
Fierce competition on price, quality, uniqueness and innovation from other EU member states and from third countries that have negotiated lower tariff rates, such as Canada and Mexico.

SECTION I. MARKET SUMMARY

The Overall Business Climate
Four years of economic recovery continue to propel the Dutch economy to growth that is higher than the EU average. In its September 2018 economic forecast, the Netherlands Bureau for Economic Policy Analysis (CPB) projects annual economic growth in 2018 to be 2.8 percent and 2.6 percent in 2019. According to the CPB, sustained economic growth continues to drive down unemployment to the fourth lowest level in four decades, from 3.9 percent in 2018 to 3.5 percent in 2019. Table 1 provides additional information on inflation and GDP development. Brexit is the one dark cloud on the horizon. CBP studies have found that Brexit will cost the Netherlands billions of euros due to the decline in trade with the United Kingdom that may result in a decline in Dutch GDP of 1-2 percent.

Consumer Trends
The Foodservice Institute Netherlands (FSIN) follows the trends in the Dutch foodservice market. Below are the main consumer trends that affect the foodservice market:

Increasingly consumers seem to be rushed. They are struggling to do many things on a regular weekday such as taking care of the children, doing their job, going to the gym, engaging socially and of course eating. Consumers are faced with a dilemma: less time for buying food and preparing meals versus a growing awareness of health and nutrition. As a result, the demand for convenient and healthy food products (albeit at an affordable price) is growing more than ever before. Demand is also growing for packaged food in smaller portions due to the growing number of people that are watching their weight and the shrinking average household size. People are increasingly eating alone and/or dining out.

Consumers’ consciousness about food products is growing. More than ever, they want to know whether the food they bought was produced in a sustainable way. They are also interested in fair-trade, locally grown and organic food products. This type of consumer, often Millennials (or Generation Z, the most populous generational cohort of all time), is also willing to pay for authenticity. They want to hear or read about who produced this food product and what the story behind product is.

This desire for authenticity also applies to foodservice outlets. Hosts that have a story to tell about their restaurant, breakfast place or craft beer bars appeal to today’s consumers. Furthermore, consumers want to feel welcome, at ease and be noticed by their host. Finally, they want to have a good time and enjoy their delicious food and drinks.

Foodservice – HRI Market
The turnover of the Dutch foodservice market last year was valued at $22.4 billion, up by 4.1 percent compared to 2016. There are three categories in the Dutch foodservice market: the traditional foodservice industry, catering and convenience.

Sales in all subcategories were up in 2017 compared to sales in the previous year. Sales in the delivery subcategory, especially for hot meals, saw an exceptional growth rate of 23 percent. There are many new-to-market restaurants delivering hot meals, supported by on-line platforms, such as Deliveroo, Foodora and UberEATS. Thuisbezorgd.nl continues to be the largest hot meal delivery company in the Netherlands with an estimated turnover of $494 million last year.

Established fast-food chains from the United States are also active in the Dutch market and are having a huge impact on the hot meal delivery market. Burger King, KFC and McDonald’s are all relative new entrants for home delivery. Smaller chains, such as Pizza Hut, Subway and Papa John’s are also getting into home delivery. New fast-food chains, such as Taco Bell and Five Guys will become serious players in the delivery market in the near future.

Table 2. Advantages and Challenges of the Dutch Foodservice Market

SECTION II. ROAD MAP FOR MARKET ENTRY

Entry Strategy

Before introducing your product, Post advises U.S. new-to-market exporters to research the Dutch market. Besides this report, FAS The Hague annually writes an Exporter Guide, the Food Processing Ingredients Market report, The Food Retail Market report and the Food and Agriculture Import Regulations and Standards report. These and other commodity reports can help a new-to-market exporter better understand the Dutch market and can be downloaded from the FAS website.

In addition, Post advises U.S. exporters to reach out to U.S. industry groups for their expertise and local network and representatives. Food Export USA for instance offers a Market Scan, which is an in-depth market research for a specific product.

When the results of the research have been analyzed, U.S. companies should consider visiting and/or exhibiting at U.S. and foreign trade shows. These are excellent venues to make contact with local buyers, to conduct product
introductions and to gauge buyers’ interest. A detailed overview of European trade shows and their product focus can be found on [http://fas-europe.org/countries/netherlands/](http://fas-europe.org/countries/netherlands/). Participation in Trade Missions organized by the U.S. industry groups has also proven to be a very effective way to meet local buyers.

**Market Structure**

Unlike the retail sector, the Dutch foodservice industry is fragmented and has many independent players. This is especially the case for cafés/bars, restaurants, cafeterias and street stalls/kiosks. The majority of fast food and delivery outlets however are consolidated and often part of an (international) chain. Well-known examples of international foodservice chains active in the Netherlands include McDonald’s, Domino’s Pizza, KFC, Burger King and New York Pizza. Chains from the United States are popular in the Netherlands because of their efficiency and consistency but also because the meals are affordable and you will receive your order fast. They continue to be successful because they have been able to respond to changing consumer demands and now for instance offer vegetarian and healthy food products. More U.S. chains recently opened outlets in the Netherlands, including Dunkin’ Donuts (coffee and donuts), Five Guys (burgers and fries), Taco Bell (tacos, burritos and quesadillas) and TGI Friday’s (casual dining fast food style).

**Distribution**

Foodservice establishments can purchase products in three different ways: directly from U.S. suppliers, from Dutch importers or local wholesalers/distributors. Large fast food chains might be importing some unique specialty ingredients directly from the United States but for the most part, they will depend on local partners. Independent players, like restaurant owners and hotels, prefer to purchase from wholesaler and distributors.

The latter prefer to have products delivered since this will save them time. Delivery of pre-ordered products also ensures that products arrive on time and in the ordered quantities. High-end hotel and restaurant players prefer to buy fresh products like bakery, produce, seafood, meat, wine and dairy products from specialized distributors. The benefit lies in the possibility to have tailor-made orders and the interpersonal relationship. Beer and non-alcoholic beverages are generally bought directly from breweries. For shelf stable grocery products, like spices, nuts, sauces, cooking ingredients and also distilled spirits and cider, hotels and restaurants turn to wholesalers.

![Figure 1. Distribution Channel Flow Diagram](image)

Source: FAS/The Hague

Due to the strict EU import requirements but also because of scale and shipping time, Dutch wholesalers and distributors prefer to work with Dutch importers that are specialized in buying U.S. products. For meat, seafood and wine, importers also often distribute imported products.

The following wholesalers are active in the Netherlands: Bidfood, Horesca, Hanos, de Kweker, Makro, Sligro, VHC and Zegro. Almost all wholesalers have shops and delivery services. Bidfood and Horesca have no shops and only deliver their products while Marko only has shops and hardly delivers. Most wholesalers operate nationwide with the exception of de Kweker, Zegro and Horesca who are active regionally.

SECTION III. COMPETITION

This section summarizes the overall competitive situation that U.S. suppliers face in the foodservice industry. U.S. exporters of products that are also grown or produced within the EU are at a disadvantage due to proximity, shipping time, tariffs and certification issues. For other products, U.S. companies compete with other third country suppliers. There are only a few products where the U.S. has limited competition. Below table outlines the strengths of the key supplying countries and the advantages and disadvantages of local suppliers are discussed per product category.

Table 7. Competitive Situation U.S. Suppliers Face in the Dutch Foodservice Market, 2017

SECTION IV. BEST PRODUCT PROSPECTS CATEGORIES

Products that in addition to a competitive price are unique and innovative or not sufficiently available have the best prospects on the Dutch market:

Products Present in the Market Which Have Good Sales Potential
- Nuts
- Seafood
- Fresh produce
- Sauces and condiments;
- Snack foods;
- California wines and craft beer

Top Consumer-Oriented Products from the World
- Wine
- Cheese
- Beef
- Grapes

Top Consumer-Oriented Products from the United States
- Tree nuts
- Sweet potatoes
- Beef
- Cranberries

Products Not Present in Significant Quantities, but Which Have Good Sales Potential
○ Food products with special certification
○ Pulses
○ Sweet corn
○ Wines from other States

Products Not Present Because They Face Significant Barriers
○ Specialty products containing non EU approved GMO derived ingredients;
○ Poultry
○ Non-NHTC beef
○ Molluscan shellfish (n.b. the U.S. and EU are working to reopen bilateral trade targeting winter 2018/2019)

Table 8. Table Best Product Prospects for the Netherlands, in million USD, 2017

<table>
<thead>
<tr>
