Russian Federation

Food and Agricultural Import Regulations and Standards Report

FAIRS Annual Country Report

Approved By:
Deanna Ayala

Prepared By:
Staff

Report Highlights:
This report is an overview of general legal and technical requirements imposed by the Russian Federation for food and agricultural imports. The following sections of this report have been considerably updated from the 2017 FAIRS report: Section I: General Food Laws, Section V: Labeling Requirements, Section VI: Other Specific Standards, Section VII: Facility and Product Registration Requirements, Section VIII: Other Certification and Testing Requirements, and Section IX: Import Procedures.
List of Abbreviations

CIS - Commonwealth of Independent States, includes Armenia, Azerbaijan, Belarus, Kazakhstan, Kyrgyzstan, Moldova, Russia, Tajikistan, Turkmenistan, Ukraine, and Uzbekistan.

CU – a Customs Union between Russia, Belarus, and Kazakhstan, launched on January 1, 2010.

CU Commission – Customs Union Commission, the CU regulatory body until July 1, 2012.

EEC – Eurasian Economic Commission, replaced the CU Commission as the regulatory body of the Customs Union as of July 1, 2012.

EAEU – Eurasian Economic Union, replaced the CU on January 1, 2015, with the addition of Armenia and Kyrgyz Republic as of January 2, 2015, and August 12, 2015, respectively.

GOST - from the Russian “Government Standard”, refers to interstate standards of the CIS; in addition to CIS countries GOSTs are also used in the Republic of Georgia.

GOST R - Russia’s national standards

HN – Hygienic Norms

SanPiN – Sanitary Norms and Rules
Executive Summary

This report is an overview of general legal and technical requirements for food and agricultural imports imposed by the Russian Federation.

The USDA Foreign Agricultural Service (FAS) office in Russia prepared this report on Food and Agricultural Import Regulations and Standards (FAIRS) for U.S. exporters of domestic food and agricultural products. While the USDA office in Russia believes this report to be accurate, policies may have changed since its preparation or clear and consistent information about these policies was not available. FAS/Russia recommends that U.S. exporters verify requirements with their import partners before any goods are shipped. Note: FINAL IMPORT APPROVAL OF ANY PRODUCT IS SUBJECT TO THE IMPORTING COUNTRY’S RULES AND REGULATIONS AS INTERPRETED BY BORDER OFFICIALS AT THE TIME OF PRODUCT ENTRY.

Despite Russia’s WTO accession in August 2012, control over imported foodstuffs by Russian agencies remains complicated and bureaucratic. While the legal framework has improved, in practice, Russia has not yet taken all of the steps expected towards improving the environment for trade. Moreover, in August 2014 Russia introduced a one-year ban on a wide range of agricultural products from the United States, Canada, European Union, Australia, and Norway in retaliation for economic sanctions against Russia. The ban has been since expanded to more countries and products, and extended until the end of 2019. For details please see GAIN report RS1821 Russia Extended Food Import Ban through End 2019.

Section I: General Food Laws

Many of Russia’s food and trade regulations have or are undergoing reform as Russia continues policy integration with Armenia, Belarus, Kyrgyzstan and Kazakhstan via the Eurasian Economic Union, which replaced the Customs Union on January 1, 2015. For additional details, please see GAIN report RS1611 Eurasian Economic Union One Year On.

Russia also continues to adjust policies pursuant to its World Trade Organization (WTO) accession on August 22, 2012. Russia and the Eurasian Economic Union (EAEU) have established the legal framework necessary for Russia to comply fully with the WTO Sanitary and Phytosanitary (SPS) Agreement. In addition, Russia undertook commitments on how it will comply with the SPS Agreement and its other WTO commitments affecting trade in agricultural products. These commitments provide U.S. exporters of agricultural products with an enforceable set of disciplines against non-scientific trade restrictions. Russia also agreed to harmonize Russia’s SPS measures with international standards. The Eurasian Economic Union has a mechanism for recognizing the equivalence of food safety systems of WTO members and rules on inspection of establishments in third-countries, such as the United States, that export product to Russia and the other EAEU Member States. Russia’s commitments also include, in part: increased transparency, including the right to provide...
comments on SPS measures before they are adopted, and application of transition periods before new measures are applied.

In August 2014, Russia introduced a ban on a list of products from the United States, Canada, the European Union, Australia, and Norway in retaliation to economic sanctions against Russia due to events in the region. The ban, initially announced for one calendar year, has been extended until the end of 2019. The list of agricultural products currently includes swine, some beef, pork and by-products, poultry, fruits, vegetables, fish, seafood, cheese, milk, and a variety of other products. For a full list of banned items in English, please see GAIN report RS1821 Russia Extended Food Import Ban through End 2019.

Russian Legislation and Principal Regulatory Documents on Foodstuff Imports

Russia’s regulatory framework governing the import of foodstuffs consists of: (1) Eurasian Economic Union documents, (2) Russian Federal Laws, (3) Russian Government documents, and (4) regulatory documents of the bodies of executive power of the Russian Federation. The major documents are the following:

1. Eurasian Economic Union documents:

   General

   Tariff and TRQs
   - EEC Collegium Decision No. 141 of August 30, 2018, “On Establishment of Tariff-Rate Quotas for Import of Certain Agricultural Goods into the Customs Territory of the Eurasian Economic Union in 2019, as well as Volumes of Tariff-Rate Quotas for Import of these Goods in the Territories of the Eurasian Economic Union Member States” (refers to beef, pork, poultry, and whey) <https://www.alta.ru/tamdoc/18kr0141/>.

General SPS Measures

Sanitary Measures
- CU Commission Decision No. 299 of May 28, 2010 “On the Application of Sanitary Measures in the Customs Union” (as amended through June 14, 2018)

Veterinary Measures
- CU Commission Decision No. 317 of June 18, 2010 “On the Application of Veterinary-Sanitary Measures in the Customs Union” (as amended through December 5, 2018)
- CU Commission Decision No. 455 of November 18, 2010 adopted “The Unified List of Dangerous and Quarantine Diseases of Animals of the Customs Union”
- CU Commission Decision No. 607 of April 7, 2011 “On Common Forms of Veterinary Certificates on Imported Goods Subject to Veterinary Control into the Customs Union Territory” (as amended through May 30, 2017)
- CU Commission Decision No. 624 of April 7, 2011 “On the Regulation on the Procedure of Development and Maintenance of the Register of Companies and Persons which Carry out Production, Reprocessing and (or) Storing Products Subject to Veterinary Control (Surveillance) and Imported into the territory of the Custom Union"
- CU Commission Decision No. 810 of September 23, 2011 “On Exemptions from the Application of the Veterinary Measures in Respect of Goods Included in the Unified List of Goods Subject to Veterinary Control (Surveillance)” (as amended through May 16, 2013)
- CU Commission Decision No. 834 of October 18, 2011 “On Regulation on Common System of Joint Inspections of Objects and Sampling of Goods (Products), Subject to Veterinary Control (Surveillance)” (as amended through October 9, 2014)
- EEC Council Decision No. 94 of October 9, 2014 “On Regulation on Common System of Joint Inspections of Objects and Sampling of Goods (Products), Subject to Veterinary Control (Surveillance)”

Phytosanitary Measures
<http://www.eurasiancommission.org/ru/act/texnreg/depsanmer/regulation/Pages/Фитосанитарные-меры.aspx>
- CU Commission Decision No. 318 of June 18, 2010 “On Assurance of Plant Quarantine in the Customs Union” (as amended through March 17, 2017)
- EEC Council Decision No. 157 of November 30, 2016 “On Approval of the Unified Quarantine Phytosanitary Requirements to Controlled Goods and Controlled Objects at the Customs Border and in the Customs Territory of the Eurasian Economic Union” (as amended through March 30, 2018), EEC courtesy translation into English
- EEC Council Decision No. 158 of November 30, 2016 “On Approval of the Unified List of Quarantine Objects of the Eurasian Economic Union” (as amended through March 30, 2018), EEC courtesy translation into English
- EEC Council Decision No. 159 of November 30, 2016 “On Approval of the Unified Rules and Norms of Ensuring Plant Quarantine in the Customs Territory of the Eurasian Economic Union”
**Technical Regulation** <http://www.eurasiancommission.org/ru/act/texnreg/deptexreg/tr/Pages/default.aspx>

- CU Commission Decision No. 319 of June 18, 2010 “On Technical Regulation in the Customs Union” (as amended through April 9, 2013)
- CU Commission Decision No. 526 of January 28, 2011 “Common List of Products which shall be Subject to Mandatory Requirements within the Customs Union” (as amended through November 23, 2012)
- CU Commission Decision No. 620 of April 7, 2011 “Common List of Products, Subject to Mandatory Evaluation (Confirmation) of Compliance within the Customs Union with the Issuance of Common Documents” (as amended through September 15, 2017)
- CU Commission Decision No. 621 of April 7, 2011 “On the Regulation on Application of Standard Schemes for Evaluation (Confirmation) of Compliance with Technical Regulations of the Customs Union”

<http://www.eurasiancommission.org/ru/act/texnreg/deptexreg/normbaza/Pages/EAC.aspx>

- EEC Collegium Decision No. 293 of December 25, 2012 “On the Unified Forms of a Certificate of Conformity and a Declaration of Conformity with the Technical Regulations of the Customs Union and the Rules of their Execution” (as amended through November 11, 2016)
  <https://www.alta.ru/tamdoc/12kr0293/>

- CU Technical Regulation TR TS 005/2011 “On Safety of Packaging” (as amended through November 15, 2016) <http://www.eurasiancommission.org/ru/act/texnreg/deptexreg/tr/Pages/bezopypakovki.aspx> For English translation of the Technical Regulation as originally adopted please, see GAIN report RS1253 Customs Union Technical Regulation on Safety of Packaging
- CU Technical Regulation TR TS 021/2011 “On Food Safety” (as amended through June 10, 2014) <http://www.eurasiancommission.org/ru/act/texnreg/deptexreg/tr/Pages/PischevayaProd.aspx> For English translation of the Technical Regulation as originally adopted please, see GAIN report RS1233 Customs Union Technical Regulation on Food Safety
- CU Technical Regulation TR TS 022/2011 “On Food Labeling” (as amended through September 14, 2018) <http://docs.cntd.ru/document/902320347#> For English translation of the Technical Regulation as originally adopted please, see GAIN report RSATO1211 Customs Union Technical Regulations on Food Products Labeling
- CU Technical Regulation TR TS 029/2012 “Safety Requirements for Food Additives, Flavorings, and Technological Aids” (as amended through September 18, 2014) <http://www.eurasiancommission.org/ru/act/texnreg/deptexreg/tr/Pages/bezopPischDobavok.aspx> For
2. Russian Federal Laws in effect to the extent that they do not contradict EAEU Agreements and/or CU Commission/EEC Decisions:

**General**
- Federal Law No. 164-FZ of December 8, 2003 “On the Basis of Regulation of Foreign Trade Activity” (as amended through July 13, 2015) [Link](http://base.garant.ru/12133486/)
- Chapters 21 and 22 of the Russian Tax Code (as amended through November 27, 2018), regulating the application of VAT (including import VAT and export VAT refunds) and excises [Link](http://base.garant.ru/10900200/)
- Part IV of the Russian Civil Code (as amended through May 23, 2018), regulating intellectual property rights [Link](http://base.garant.ru/10164072/)
- The Federal Law on Customs Regulation No. 311 dated November 27, 2010 (as amended through August 3, 2018) [Link](http://base.garant.ru/12180625/)

**General SPS Measures**
- Federal Law No. 86-FZ of July 5, 1996 “On State Regulation In The Sphere Of Genetic Engineering Activities” (as amended through July 3, 2016) [Link](http://base.garant.ru/10135402/)

**Sanitary Measures**
- Federal Law No. 52-FZ of March 30, 1999 “On The Sanitary And Epidemiological Well-Being Of The Population” (as amended through August 3, 2018) [Link](http://base.garant.ru/12115118/)
- Federal Law No. 29-FZ of January 2, 2000 “On The Quality And Safety Of Food Products” (as amended through April 23, 2018) [Link](http://base.garant.ru/12117866/)
Veterinary Measures

Phytosanitary Measures

Technical Regulation

3. Russian Government Regulations:

Sanitary Measures

Veterinary Measures

Technical Regulation
- Government Resolution No. 982 of December 1, 2009 “On Approval of the Unified List of Products Subject to Mandatory Certification and the Unified List of Products, for which the Confirmation of Conformity is Made in the Form of a Declaration of Conformity” (as amended through February 21, 2018). <http://base.garant.ru/12171546/>
- Government Resolution No. 839 of September 23, 2013, “On the State Registration of Genetically-Engineered-Modified Organisms Intended for Release into the Environment as well as Products Derived from the Use of Such Organisms or Containing Such Organisms” (as amended through October 1, 2018) <http://ivo.garant.ru/#/document/70457814/paragraph/935:0>

4. Russian Competent Authority Regulations:

Sanitary Measures
- Hygienic Requirements For Foodstuff Safety and Nutrition (SanPiN 2.3.2.1078-01, as amended through July 6, 2011)
- Hygienic Requirements for Food Additives (SanPiN 2.3.2.1293-03, as amended through December 23, 2010)
- Hygiene Norms for Chemicals and Pesticides in the External Entities (HN 1.2.3539-18). The Norms determine MRL for chemicals and pesticides in objects of environment, including agricultural crops.

**Veterinary Measures**

**Phytosanitary Measures**
- Order of the Ministry of Agriculture No. 456 of December 29, 2010 “On Approval of Rules to Ensure Plant Quarantine for Regulated Products Imported to the Russian Federation, as well as Stored, Moved, Transported, Processed or Used,” updated the Russian phytosanitary requirements and regulations for imported products of quarantine concern in accordance with the CU approach and international requirements (as amended through October 11, 2012). [http://docs.cntd.ru/document/902255183]

**Technical Regulation**
- Order of the Federal Service for the Protection of Consumer Rights and Human Well-Being No. 781 of July 23, 2012, “On Approval of Administrative Regulation of the Federal Service for the Protection of Consumer Rights and Human Well-Being for Provision of the Public Service for State Registration of the Chemical and Biological Substances and Drugs Manufactured on their Basis, which are Potentially Dangerous to Humans (except for Medicines), Introduced into Production for the First Time, and have not been used Previously; Certain Types of Products that Pose a Potential Danger to Humans (except for Medicines); Certain Types of Products, Including Food Products, Imported into the Customs Territory of the Customs Union for the First Time” (as amended through April 7, 2016) [http://www.alta.ru/show_orders.php?action=view&filename=12a00781]
- General Requirements For Providing Consumer Information Regarding Foodstuffs (GOST R 51074-2003, as amended through July 1, 2013)

**Russia’s Federal Regulatory Bodies for Imported Foodstuffs**

The Federal Veterinary and Phytosanitary Surveillance Service (known as Rosselkhoznadzor or VPSS) of the Ministry of Agriculture of the Russian Federation monitors veterinary and phytosanitary conditions within Russia and enforces Russian legal requirements for veterinary and plant health. Rosselkhoznadzor has the authority over veterinary and phytosanitary matters at Russia’s borders and within Russia’s interior and is responsible for protecting the Russian Federation from plant and animal diseases.

The Federal Service for Surveillance of Consumer Rights Protection and Human Welfare of the Government of the Russian Federation (known as Rospotrebnadzor) is responsible for food safety. Based on SanPiN 2.3.2.1078-01 and the regulations of the Eurasian Economic Union, Rospotrebnadzor oversees the domestic foodstuffs market in Russia. Rospotrebnadzor may prohibit the transport and sale of products that do not meet official requirements.
The Federal Agency for Technical Regulation and Metrology (known as Rosstandart or Rostekhregulirovaniye) is part of the Ministry of Industry and Trade. Rosstandart manages product assessment, processing, and servicing to determine if products conform to national standards and certification criteria.

The Federal Customs Service of Russia (FTS), which is part of the Ministry of Finance, regulates foreign economic activity with a system of customs fees and charges, and carries out customs control.

The Ministry of Industry and Trade is in charge of non-tariff regulation for external economic activity including licensing and quota administration.

The Ministry of Economic Development determines import quota volumes.

**Eurasian Economic Union**

Since 2010, Russia has been part of the Eurasian economic integration project with Belarus and Kazakhstan. The process, which first materialized in 2010 in the form of the Russia-Belarus-Kazakhstan Customs Union and evolved into the Single Economic Space (SES) in 2012, continued with the launch of the Eurasian Economic Union (EAEU) on January 1, 2015, which currently includes Armenia, Belarus, Kazakhstan, Kyrgyzstan, and Russia. The CU/SES/EAEU regulatory body is the Eurasian Economic Commission (EEC), which replaced the initial CU body, the Customs Union Commission, in 2012. For details on the EEC structure and authority please see GAIN report [RS1611](#) Eurasian Economic Union One Year On.

**Section II: Food Additive Regulations**

Controls and regulations on food additives are included in [SanPiN 2.3.2.1078-01](#) (Section 9) and [SanPiN-2.3.2.1293-03](#), “Hygienic Requirements for Food Additives.” These rules establish safety requirements for food additives in order to make products safe for human consumption. The total list of allowed food additives consists of several hundred items and is given in Attachments 1, 3, 4, 5, and 6 to the [SanPiN 2.3.2.1293-03](#). Rospotrebnadzor may prohibit or allow food additives based on safety tests.

In July 2012, the EEC adopted the Technical Regulation of the Customs Union on “Safety Requirements for Food Additives, Flavorings, and Technological Aids” (TR TS 029/2012), which contains a list of food additives allowed for use in food product manufacturing. For more information please see GAIN report [RS1338 Customs Union Technical Regulation on Food Additives](#). The TR TS 029/2012 came into effect on July 1, 2013, and became the primary document regulating production and quality of products in the food ingredients and additives sector. However, Russian national regulations mentioned above continue to apply to the extent they do not contradict the EAEU regulations.
Section III: Pesticides and Other Contaminants

Beginning March 19, 2013, the state registration of pesticides and agrochemicals falls under the purview of the Ministry of Agriculture (Russian Government Resolution No. 190 of March 6, 2013). The requirements for registration of pesticides, registration procedures, and the Catalog (State Register) of pesticides and agrochemicals are on the Ministry of Agriculture website: http://www.mcx.ru/documents/document/v7_show/29068.133.htm. The Catalog is regularly updated with new registered pesticides and chemicals. The catalog contains the brand name, name of registrant, date of registration, and expiration date. Chemical agents not listed in this catalog are banned from use in Russia and their residue is not allowed in or on imported foodstuffs.

Rospotrebnadzor is responsible for setting tolerances of pesticides, veterinary drugs, and other contaminants in food. However, Rosselkhoznadzor is the primary enforcer of such tolerances in imported food and agricultural crops at the border.

Russian tolerances are based on the requirements stipulated in the EAEU technical regulations on safety of food and agricultural products. For details see GAIN reports RS1343 Customs Union Food Technical Regulations in Force as of 1 July 2013, RS1382 Customs Union Technical Regulation on Milk and Dairy Products, RS1384 Customs Union Technical Regulation on Meat, RS1734 Technical Regulation on Safety of Fish and Fish Products, and RS1752 EAEU Technical Regulation on Packaged Water. Section 15 in Chapter II of the CU Commission Decision No. 299, “Requirements for Pesticides and Agrochemicals,” provides maximum residue levels (MRLs) for soil, air, water, the human body, and agricultural products. These EAEU requirements were most recently amended in 2015, for details please see GAIN report RS1596 Eurasia Economic Union - New Pesticide MRLs.

Additionally, Russian national regulations continue to apply to the extent they do not contradict the EAEU regulations. Currently, Russian MRLs for pesticides in agricultural crops are established in the Hygiene Norms for Chemicals and Pesticides in the External Entities, HN 1.2.3539-18.

Rosselkhoznadzor requires exporters to provide information on the pesticides used during the growth and storage of plant products, the date of the last treatment, and on the residue levels of pesticides in these products. The information may be in the form of a letter from the producer, from the producers’ association, etc. There is no standard form, but Rosselkhoznadzor developed a sample form of a letter (declaration) in Russian on pesticides (see Attachment I).
Section IV: Packaging and Container Requirements

The CU Technical Regulation “On Safety of Packaging” (TR TS 005/2011), which contains requirements for all kinds of packaging including metal, polymer, carton, wooden, glass, and composite packing, came into force on July 1, 2012. The food packaging should comply with the sanitary-hygienic requirements given in the Attachment 1 of the TR TS 005/2011. Before the packaging can be released into circulation in the territory of the Eurasian Economic Union, it needs to go through the obligatory confirmation of compliance with the requirements of the current Technical Regulation. As a result, producer and importer obtain the declaration of conformity for the packaging.

Other EAEU technical regulations also establish product-specific packaging requirements for specific food products, including fat-and-oil products, juice products, meat products, alcohol products, milk and dairy products, specialized dietary food products, fish, and potable water. For more information please see GAIN reports RS1343 Customs Union Food Technical Regulations in Force as of 1 July 2013, RS1382 Customs Union Technical Regulation on Milk and Dairy Products, RS1384 Customs Union Technical Regulation on Meat, RS1734 Technical Regulation on Safety of Fish and Fish Products, and RS1752 EAEU Technical Regulation on Packaged Water.

Before TR TS 005/2011 fully came into effect, requirements for foodstuff packaging were regulated by numerous Russian standards, varying by type of packaging. TR TS 005/2011 is currently the primary document regulating packaging, but Russian national regulations continue to apply to the extent they do not contradict the EAEU regulations.

Hygienic standards for materials that come into contact with foodstuffs are listed in Hygienic Norms (HN) 2.3.3.972-00, which also specify the maximum permissible quantities of chemical substances allowed to escape from materials in contact with foodstuffs. Packing materials and transport containers must have completed sanitary and epidemiological inspections and have a certificate of conformity.

Sanitary and hygienic requirements, regulated by GOST R 51074-2003, must also be used when selecting food packaging. Packing materials may not be manufactured from highly toxic compounds having cumulative characteristics, including carcinogenicity, mutagenicity, or allergenicity. The material must not change the organoleptic or nutritional qualities of the foodstuffs, and may not discharge hazardous substances in excess of permissible levels.

Many products imported into Russia must meet product-specific packaging requirements. Packaged grains, for example, must be packaged in air-permeable materials as stated in the Ministry of Agriculture’s Order No. 456 of December 29, 2010.

Specifications for packaging are a vital part of each commercial contract. Before signing a contract, the importer should research the specific packaging requirements and advise the exporter accordingly.
Packaging (e.g., cardboard or paper boxes, plastic or polymer packets, bottles or cans) that comes into direct contact with products must be certified.

The permeability of the packaging material to gas, steam, water, fats, and odors is an important consideration. For instance, chilled meat must be packaged in materials with low-vapor permeability in order to prevent the loss of moisture. The material must also meet specific gas-permeability levels to preserve the color. Products must be packed reliably, taking into account their nature, the method of transport, and storage temperatures.

For more information please see GAIN report RS1253 Customs Union Technical Regulation on Safety of Packaging.

Section V: Labeling Requirements

On July 1, 2013, the Technical Regulation of the Customs Union “Food Products Labeling” (TR TS 022/2011) came into effect. The document outlines regulations for food products labeling including the requirements for name, ingredients, nutritional contents and value, quantity, date of production, validity, address of manufacturer and importer, presence of genetically modified organisms, etc. For more information please see the GAIN report RSATO1211 Customs Union Technical Regulations on Food Products Labeling.

The general packaged food requirements for information to be presented on the label in the Russian language are:

- Product name;
- Data about the manufacturer (including name, country, and address) or manufacturer representative or importer;
- Net weight, or volume, or quantity;
- Composition (ingredients) (with a few exceptions, e.g. it is not required to indicate ingredients for unprocessed fresh fruit, berries and vegetables, or single-component foods);
- Information about the presence of genetically engineered (GE) components in the product (including information that the product was produced from/with GE components);
- Nutritional value of the product;
- Storage conditions prescribed by producer or by technical regulations of EAEU. In case the product’s quality or safety is changing after opening the package – storage conditions for opened product;
- Use-by date or shelf-life expiration date;
- Date of production and packaging;
- Recommendations or limitations of usage, including preparation mode if needed, in case the usage without these recommendations or limitations may be complicated, harmful or lead to the product’s quality degradation.
“Eurasian Conformity” mark (EAC).

The information should be printed in a language of the EAEU Member States. Additional information can be placed on the same label, such as: brand, technical document license, information about the right holder of the brand, the origin of product’s components, name of licenser, voluntary certification labels.

In addition to the above, the TR TS 022/2011 also establishes a number of product-specific requirements.

Non-alcoholic beverages containing more than 150 mg/l of caffeine or drug-plants or its extracts enough to lead to a tonic effect should have written warning ‘Not recommended for people under 18 y.o., pregnant, nursing, and people suffering from increased nervous irritability, insomnia, and arterial hypertension.

The EAEU Technical Regulation on food products labeling can be found at http://www.eurasiancommission.org/ru/act/texnreg/deptexreg/tr/Documents/TrTsPishevkaMarkirovka.pdf.

Other EAEU technical regulations also establish product-specific labeling requirements for specific food products, including fat-and-oil products, juice products, meat products, alcohol products, milk and dairy products, specialized dietary food products, fish, and potable water. For more information please see GAIN reports RS1343 Customs Union Food Technical Regulations in Force as of 1 July 2013, RS1382 Customs Union Technical Regulation on Milk and Dairy Products, RS1384 Customs Union Technical Regulation on Meat, RS1734 Technical Regulation on Safety of Fish and Fish Products, and RS1752 EAEU Technical Regulation on Packaged Water.

EAEU technical regulations on safety of certain food and agricultural products also require that regulated products that meet their requirements and have passed conformity assessment procedures be marked with the uniform mark of products in circulation on the market of the EAEU Member States (“Eurasian Conformity” mark, approved by Decision of the CU Commission No. 711 of July 15, 2011). Thus, the “Eurasian Conformity” mark is meant to show that the product has been produced in accordance with the relevant EAEU technical regulations and has passed all procedures of conformity assessment (confirmation) established in the relevant technical regulations. For details, please see GAIN reports RS1493 Eurasian Conformity Mark for Poultry and Red Meats, and RS1506 Eurasian Conformity Mark for Food Products.

---

1 Assessment (confirmation) of conformity in the EAEU should be carried out by legal entities that are registered in accordance with the legislation of the Eurasian Economic Union Member State on its territory, such as importers.
Russian Government Decree No. 943 of September 18, 2012, “On the Specifics of Marking Products Released into Circulation for the First Time, Including with a Market Circulation Mark or a Conformity Mark and the Procedure for Informing Purchasers, Including Consumers, about the Potential Harm of Such Products and the Factors Causing such Harm,” specifies the labeling requirements for products that are released into circulation in the Russian market for the first time and that are subject to mandatory certification or conformity declaration. For more information please see GAIN report RS1257 New Regulations on Conformity and Labeling of New Products.

Other Specific Labeling Requirements

*Genetically Engineered Crops*

For any product with biotech (GE) components or processed from GE materials, the label must show that it is a “GMO product” or a “product obtained from GMO” even if the product does not contain DNA or proteins. However, the presence of up to 0.9 percent of each GE ingredient is considered adventitious. The CU Technical Regulation TR TS 022/2011 on Food Labeling requires that food products shall be labeled as GE as follows.

The information on the label must read (in Russian):
- for products containing viable GE microorganisms – “Product contains live genetically modified microorganisms;”
- for products containing unviable GE microorganisms – “Product is obtained based on genetically modified microorganisms;” and
- for products freed from GE microorganisms or for products obtained based on components freed from GE microorganisms – “Product has components that are obtained based on genetically modified microorganisms.”

The requirements for information on GE organisms/line in feeds of plant origin are stipulated in the CU Technical Regulation “On Safety of Grain”, which covers both grains and oilseeds (TR TS 015/2011, please see GAIN report RS1250 Customs Union Technical Regulation on Safety of Grain.) This Technical Regulation stipulates that grain/oilseeds transported unpacked should be accompanied by shipping documents that ensure their traceability and provide information on GE organisms/lines if presence of GE organisms/lines is higher than 0.9 percent. For such grain/oilseeds the information should be given: “Genetically modified grain” or “grain obtained from the use of genetically modified organisms” or “grain contains components of genetically modified organisms”, indicating the unique identifier of the transformation event.

Moreover, CU Technical Regulation “On Safety of Grain” stipulates that grain/oilseeds (for both food and feed use) may contain only registered GE lines. Presence of more than 0.9 percent of non-registered GE lines is prohibited both in products that are declared as GE, and in non-GE products.
In 2017, the EEC amended Technical Regulation of the Customs Union “On Food Products Labeling” (TR TS 022/2011) to require that for products obtained with the use of GMOs the inscription “GMO” should be marked next to the unified mark of products circulating on the market of the Eurasian Economic Union Member States and the inscription should be similar to the unified mark in form and size. While the amendment comes into force on December 26, 2018, the EEC has established an 18 months transition period for the new labeling requirements for products obtained with the use of GMOs. In particular, during this transition period companies will be allowed to produce and release into circulation products in accordance with the previous requirements of the EAEU TR “On Food Products Labeling,” while sale of such products shall be allowed within their shelf life.

For more details, please see Agricultural Biotechnology Annual 2018 for the Russian Federation.

### Organic Products

Currently, no officially recognized organic certification is available in Russia. However, producers and importers have the opportunity to certify organic products on a voluntary basis. The Russian Standard GOST R 57022-2016 “Organic production. The procedure of voluntary certification” regulating voluntary organic certification was adopted in August 2016 and came into force as of January 1, 2017.

The National Organic Council has published the official schedule by which GOR and federal executive bodies are expected to draft the acts necessary for implementation of the Federal Law, which would then be presented for further government approval. According to the plan, the Ministry of Agriculture should work out orders regulating maintenance of the unified state register of organic producers and
approving the graphic symbol for marking organic products and the terms of its use in the 4th quarter of 2019.

The major terms and definition related to organics may be found in the National Standard for Organic Products “Terms and Definitions”. The Standard includes definitions of organic agriculture, organic production, types of organic foods, etc. For more information, please see GAIN report RFATO003 National Organic Standard Terms and Definitions Approved.

Section VI: Other Specific Standards

Specific Standards for Meat and Poultry Products

Meat and poultry export requirements are frequently revised. Please consult the current export requirements at http://www.fsis.usda.gov/wps/portal/fsis/topics/international-affairs/exporting-products/export-library-requirements-by-country/Russia

The key EAEU regulation covering standards and requirements for meat and meat products is Technical Regulation of the Customs Union “On Safety of Meat and Meat Products” that has been in force since May 1, 2014. For details please see GAIN report RS1384 Customs Union Technical Regulation on Meat.

Specific Standards for Fish and Seafood Products

Specific export procedures for U.S. fish and seafood processors interested in shipping their products to the Russian Federation are published on the U.S. Department of Commerce/National Marine Fisheries Service site: https://www.fisheries.noaa.gov/export-requirements-country-and-jurisdiction-n-z#russia

The key EAEU regulation covering standards and requirements for fish and fish products is Technical Regulation of the Eurasian Economic Union “On Safety of Fish and Fish Products” (TR EAEU 040/2016) that for most part came into force as of September 1, 2017. For details please see GAIN report RS1734 Technical Regulation on Safety of Fish and Fish Products.

A label in the Russian language for marine products must contain information in accordance with the requirements of Technical Regulation on Safety of Fish and Fish Products:

- Title (name) of the product (commodity name or biological name);
- Fishery location;
- Length and weight of fish (large, medium, small);
- Type of cutting (de-headed, eviscerated, sheet, pieces, etc.);
- Type of processing (salted, smoked cured by drying, etc.);
- Level of saltiness (lightly-salted, slightly-salted, medium-salted, strongly-salted);
Name and location of the manufacturer [legal address including the country, if it is different from the legal address, then the address (addresses) of the production facility (facilities)] and the organization in the Russian Federation that is authorized by the manufacturer to accept claims from the customers on its territory;

Trademark of the manufacturer (if available);

Net weight;

Nutritional value, vitamin content;

Storage conditions;

Period of time spent in storage for both live and frozen fish, for non-fish fishery subjects;

Shelf life (use by date) for the foodstuffs included into the list of products adopted by the government of the Russian Federation, which are considered to be unfit for being used in accordance with the purpose upon completion of the term;

Date of manufacture and date of packing [date, month, year (date, month and hour of completion of the technological process for special perishable products)];

Composition of the product, including all food additives, flavorings, biologically active food additives, ingredients of the products having a non-traditional composition;

Information about conformity confirmation (when the certificate of Conformity is available);

Technique and conditions to manufacture ready to consume dishes (for semi-finished products/convenience food);

Vacuum packed (when vacuum packaging is used);

Information on “GMO” content (if a level of any “GMO” component exceeds allowed norm);

Location of the fishery area, length and weight of fish, type of cutting, type of processing, level of saltiness, composition of the product, and information on the preparation technique and/or consumption is indicated when required; and

On consumer packaging for fish and seafood, produced in aquaculture, additional marking is required: “Aquaculture production”

SanPiN 2.3.2.1078-01, “The Hygienic Requirements for Foodstuff Safety and Nutritional Value”, also contains requirements for fish and fish products to ensure the quality of frozen fish and products, including the need to specify weight of glaze applied on different categories of seafood, and provide the consumer with more detailed information regarding the product. Please refer to GAIN RS1027 Amendments to the Russian Sanitary and Labeling Requirements for Fish for more details.

Currently, the following national standards regulate consumer indices of the products in a particular group:

- GOST R 51493-99, Frozen eviscerated and uneviscerated fish. Specifications;
- GOST R 51494-99, Frozen fillets of oceanic and marine fish. Specifications;
- GOST R 51495-99, Frozen squid. Specifications;
- GOST R 51496-99, Frozen raw, partially and fully cooked shrimps. Specifications; and,
- GOST R 51497-99, Fish, crustaceans, and cuttlefish. Size categories.

Other imported goods from fish and seafood must meet quality indices in accordance with interstate standards accepted in the CIS countries:

- GOST 1368-2003, Fish, all types of processing, length and weight;
- GOST 24896-2013, Live fish, technical specifications;
- GOST 814-96, Chilled fish, technical specifications;
- GOST 30314-2006, Frozen scallop fillet, technical specifications.

**Specific Standards for Wine, Beer and Other Alcoholic Beverages**

There are many acts of legislation covering alcohol; however, the principal laws and legislative acts regulating Russia’s alcohol imports are:

- Federal Law No. 171 of November 22, 1995 “On state regulation of production and turnover of ethyl alcohol and alcohol containing products and on limiting consumption (drinking) of alcohol containing products” (as amended through November 28, 2018);
- Federal Law No. 245 of July 3, 2016 “Amendments to chapter 25.3, article 333.33, paragraph 94 of the second part of Tax Code” (payment for alcohol license starting from August 3, 2016);
- Resolution of the Government of the Russian Federation No. 872 of December 31, 2005, “Certification Attached to the Shipment Customs Declaration” (as amended through August 28, 2018);
- Resolution of the Government of the Russian Federation No. 55 of January 19, 1998 “On Approval of the Rules for the Sale of Certain Types of Goods, a List of Durable Goods that are not Covered by the Buyer's Requirement to Grant him Free of Charge for the Period of Repair or Replacement of a Similar Product, and a List of Non-Food Goods of Good Quality that cannot be Returned or Exchanged for a Similar Product of Other Size, Shape, Dimensions, Style, Color or Configuration” (as amended through May 30, 2018);
• Order of the Federal Service for Regulation of the Alcohol Market No. 59n of October 26, 2010, “Technical Conditions in the Sphere of Production and Turnover of Alcoholic and Spirits-Containing Production as regards Storage of Alcoholic and Spirits-Containing Production, Packed in Consumer Package” (as amended through November 30, 2012);

• Resolution of the Government of the Russian Federation No. 815 of August 9, 2012, “On Providing Declaration on Volume of Production, Circulation, and/or Usage of Ethyl Spirit, Alcoholic, and Alcohol-Containing Products, on Usage of Production Capacity” (as amended through December 29, 2017);

• Resolution of the Government of the Russian Federation of December 29, 2015, No. 1459, “Functioning of the Unified State Automated Information System for Accounting Volume of Production and Turnover of Ethyl Spirit, Alcoholic and Alcohol-Containing Products” (as amended through September 27, 2018);

• Federal Law No. 38 of March 13, 2006 “On Advertising” (as amended through October 30, 2018);

• Resolution of the Chief Medical Officer of the Russian Federation No. 46 of June 29, 2009, “On Supervision over alcohol products”;

• Decree of the Russian President Vladimir Putin No. 1883 of December 31, 2008 “Formation the Federal Service for Regulation of the Alcohol Market” (as amended through May 9, 2016);

Key Russian national standards for alcohol are:

GOST 32098-2013 – Vodkas and Special Vodkas, Liqueur and Vodka Products. Packaging, labeling, transportation and storage;

GOST 32061-2013 – Wine products. Packaging, labeling, transportation and storage

GOST 32030-2013 – Table wines and table wine stocks. General Specifications;

GOST 31729-2015 – Wine drinks. General specifications;

GOST 33336-2015 – Sparkling wine. General specifications (from January 1, 2017);

GOST 33311-2015 – Sparkling wines. General rules of production (from January 1, 2017);

GOST 33287-2015 – Wine and wine materials (from January 1, 2017);
In addition to the general information required for a majority of all imported alcohol products, the following specific labeling requirements apply:

- For beer - The type of beer (light, semi-dark, dark), the value of alcohol by percent (except for non-alcoholic beer and special beer with aromatic and flavored additives), the minimum percentage of ethyl alcohol by volume, bottling date, the composition of the primary raw materials used to manufacture the beer, and the nutritional value must be on the label.

- For wine - In addition to the name and address of the producer, and the organization in the Russian Federation that is authorized to accept claims from the consumer in Russia (if available), the facility that bottled the wine, bottling date or the date it matures (for sparkling wines that age in bottles); the percentage of ethyl alcohol by volume, the mass concentration of the sugars (except for dry wines) should also be indicated. For sparkling wines, flavored wines, and ciders, classification based on the sugar content; the year of harvest (for controlled appellation wines based on the location, as well as for mature wines prepared from the grapes harvested during one year); the expiration date for wine in which the percentage of ethyl alcohol by volume is less than 10%, and nutritional value should be indicated on the label as well.

- For alcoholic beverages - The volume of ethyl alcohol, concentration of sugar (if sugar is in the formulation) by mass, bottling date, the composition (including the list of the primary ingredients influencing the taste and the aroma of the product), the expiration date for beverages in which ethyl alcohol by volume is less than 10 percent.

As of February 1, 2007, a mandatory warning must be displayed on the label about the health risks associated with excessive alcohol consumption.

Russian regulatory documentation requirements are more prescriptive than those of the Eurasian Economic Union for particular quality and safety indices of alcohol products. For example, the following information is required:

- Content of methanol, fusel oils, aldehydes, and esters in cognac and brandy;
- Volume of iron in cognac/brandy;
- Volume of total sulfur dioxide, citric acid, reduced extract in wines, in addition to exclusive requirements for the absence of sediment (deposits) in wines (crust on the walls of the bottle or on the bottom of the bottle is only acceptable in special collection wines); and
- Content of preservatives and microorganisms in beer and other low alcohol beverages.
Information about the state registration and declaration of conformity is entered into a document attached to the shipment’s customs declaration that is required for alcohol products to enter Russian territory. This document also contains information about excise stamps. When buying and shipping ethyl alcohol (including denatured alcohol), if a non-consumer packaged product contains alcohol, and the ethyl alcohol content makes up more than 60 percent of the final product, one must obtain an additional document. This document contains a reference to the number of the Russian national technical regulation or technical specifications with which the product must comply.

The Eurasian Economic Union has recently adopted a Technical Regulation on the “Safety of Alcoholic Beverages” (TR) that will come into force as of January 9, 2021. The TR establishes unified mandatory requirements for alcoholic products and its processes of manufacturing, storage, transportation, disposal and recycling, as well as mandatory requirements to terminology, packaging, labeling, ensuring product safety and preventing action misleading consumers, and systematizing the provisions of the regulations of the EAEU Member States.

Section VII: Facility and Product Registration Requirements

Products under sanitary-epidemiological control

CU Commission Decision No. 299 of May 28, 2010, and its amendments define the products subject to sanitary-epidemiological control. To clear customs, these products must be accompanied by documents confirming their conformity with Russian standards of safety and quality, i.e. the state registration (only for regulated products that are imported into the EAEU for the first time) and the Declaration of Conformity. To expedite customs clearance procedures, and to reduce the cost of clearance and temporary storage, it is recommended that the state registration and declaration of conformity of the imported products be conducted approximately one month in advance of the shipment’s arrival at customs. To do this, the supplier must provide the following to the importer:

- Product samples of every type and/or name, in sufficient quantities to conduct the sanitary-epidemiological expert examination and certification (samples for testing are not subject to customs fees);
- Contract to supply the product (or data about the contract), the annex to the contract or specifications (or the data about it);
- Documents confirming the origin, safety, and quality of the product (issued by the authorities of the country of origin), manufacturer of the product, the certificate of origin or another document confirming the origin, quality certificate and/or protocols of testing, and analysis; and
- Samples or mockups of the label.

All documents, labels, and markings must be translated into the Russian language, and copies and their translations must be certified in accordance with established procedures.
Product Registration

Prior to importation, importers must register certain products that are subject to sanitary-epidemiological control. Initially, a list of products subject to state registration was established by CU Commission Decision No. 299 and included a wide range of food products. However, with entry into full force of the CU Technical Regulation on Food Safety as of February 15, 2015, as well as adoption and implementation of multiple EAEU Technical Regulations for food products, all food products were removed from the list of products that are subject to state registration per CU Commission Decision No. 299 as of August 30, 2018.

The key EAEU document regulating state registration of certain food products is currently the CU Technical Regulation on Food Safety, which establishes the following list of products that are subject to state registration:

- Specialized food products, as follows:
  - food products for baby food, including potable water for baby food;
  - food products of dietary therapeutic and dietary prophylactic nutrition;
  - mineral natural, medical table mineral water, medical mineral water with mineralization above 1 mg/dm3 or of lower mineralization, containing biologically active substances in the amount of not less than balneological norms;
  - food products for sportsmen, pregnant and nursing women;
  - biologically active additives to food (BAA).

- Novel food products

Rospotrebnadzor handles such registration for Russia according to its Administrative Regulation (as amended through April 7, 2016).

Genetically Engineered Crops

Since 2000, the Russian government has required registration of biotechnology crops (events) and products obtained from or containing these events, which are imported to the country, and has monitored marketing of products derived from products of biotechnology.

---

2 The CU Technical Regulation on Food Safety defines novel food products as “food products (including food additives and flavorings) that were not previously used for human consumption on the customs territory of the Customs Union, namely: with new or deliberately modified primary molecular structure; consisting of or being isolated from microorganisms, fungi or algae; from plants; isolated from animals, obtained from GMO or with their use; nanomaterials and nanotechnology products except for food products obtained by traditional methods, being in circulation and considered safe by virtue of experience.”
Russia established a system for the approval of agricultural biotechnology food and feed products via Government Resolution No. 839 of 2013. The Resolution was amended in 2017 to conform to the Federal Law No. 358 of July 3, 2016, which bans cultivation and breeding of GE plants and animals within the territory of the Russian Federation (for details please see GAIN Report RS1634 Russia Bans Cultivation and Breeding of GE Crops and Animals).

The Federal Service for Surveillance of Consumer Rights Protection and Human Welfare (Rospotrebnadzor) had developed regulatory documents for registration of GE organisms for food by July 1st, 2017 and the mechanism is working for registration of GE organisms for food. Overall the registration procedure for GE food has not changed and registration once granted is given an unlimited term while registrations for feed use are granted for any period from one up to ten years.

Currently, 14 corn lines, eight soybean lines, one rice line, one sugar beet line and two potato lines are registered for food use in Russia and in the Eurasian Economic Union (EAEU).

Meanwhile, the Ministry of Agriculture has not yet approved regulatory documents for GE organisms for feeds, feed additives and veterinary pharmaceuticals. Currently the Ministry of Agriculture is working with the Federal Service for Veterinary and Phytosanitary Surveillance (Rosselkhoznadzor) to come to mutual agreement on methodological guidance (MUK) for registration of GE lines for feed and feed additives, however, the timeline for agreement on MUK is unclear.

Feed use registrations have only been granted for a period of five years, and the registration periods for only three soybean lines and five corn lines are still valid, the registrations for the remaining 17 corn and soybean lines began to expire in 2017 and continue according to each event’s expiration date. Despite efforts to re-register the lines, until a regulatory mechanism for registration of GE feeds is approved, the registration renewal process and timeline are unclear.

Rosselkhoznadzor’s instructions define feed as GE-free if the product contains 0.5 percent or less of a non-registered biotech product, or if the product contains 0.9 percent or less of any registered biotech products. However, the 0.5 percent threshold requirement for non-registered biotech lines contradicts the CU Technical Regulation on Safety of Grain that increased this threshold to 0.9 percent for feeds based on grains/oilseeds.

**Alcohol**

Russia’s Federal Law 171 of 1995 establishes the legislative groundwork for the production and handling of ethyl alcohol, alcohol products, and products containing alcohol in the Russian Federation, including products with ethyl alcohol content exceeding 0.5 percent by volume of the final product, as well as the production and handling of beer, and the production and handling of natural beverages with alcohol content exceeding 1.5 percent and below 22 percent by volume manufactured from wine.
materials and produced without fortification with ethyl alcohol. This law delineates special requirements for the production and handling of alcoholic beverages and products containing alcohol. Registration of data about the alcoholic beverages and products containing alcohol in the Unified Federal Automated Information System (UFAIS), which tracks production and turnover of ethyl spirits, is one of these special requirements. The goal of the UFAIS is to account for and control all alcohol beverages in the Russian market and help the GOR collect all alcohol tax revenue. The Federal Service for Regulation of the Alcohol Market (known as Rosalcoholregulirovaniye or FSR) regulates the UFAIS.

Per Russia’s Government Resolution No. 474 of 2013 “On Submission of Notifications about the Beginning of Turnover (Sale) of Alcoholic Products on the Territory of the Russian Federation,” mandatory notifications have been required since October 1, 2013. Required notifications are submitted to the FSR no later than five days prior to providing the application for fixation of information in UFAIS.

The notification shall contain the following information:

- full and short name of Organization submitting the notification, as well as the producer of alcoholic products, their location and taxpayer identification number (for Organizations);
- the date of the first delivery (indicated in accordance with the supply contract);
- name of alcoholic products, and trademark information (if available);
- description of the characteristics of alcohol products;
- description of the technological process of manufacture of alcohol products and production control;
- the conditions of storage of alcoholic beverages:
  - temperature (in Celsius degrees);
  - humidity (the relative humidity in percent);
- the conditions of transportation of alcoholic products;
- conditions of sale of alcoholic beverages;
- conditions for disposing of alcohol products;
- marking description of alcoholic beverages;
- other information about alcoholic beverages (at the discretion of the Organization).

**Products under veterinary control**

CU Commission Decision No. 317 and its amendments define the products subject to veterinary control: http://www.eurasiancommission.org/ru/act/texnreg/depsanmer/regulation/Documents/Пп.1%20Единый%20перечень%20тов.pdf. This list currently includes the following categories:
- Live animals (all animals, including agricultural, domestic, wild, zoo, sea, commercial fur, circus, laboratory animals, etc.), live birds (all birds, including domestic, wild, ornamental, etc.), semen, and embryos
- All types of meat and meat by-products, including poultry
- Milk and dairy products
- Eggs and processed eggs products
- Materials of animal origin
- Feed and feed additives for animals including pet food
- Leguminous vegetables used for veterinary purposes, including as animal feed
- Fish and sea-products and products of their processing

As of August 22, 2012, the date of Russia’s WTO accession, a number of products from the above list, including grains for feed and feeds of plant origin such as oilseed cake and meal, products of milling and oilseeds extraction industries, and some prepared foods such as ice-cream, are no longer subject to veterinary control when exported to Russia. For the full list of exempt products, see CU Commission Decision No. 810 of September 23, 2011. For additional information, please see GAIN report RS1261 Russia No Longer Requires Veterinary Certificates for Key Imported Feeds of Plant Origin Including Soybean Meal, Grains for Feeds and DDGs.

Lists of Approved Establishments

In general, products subject to veterinary control are required to come from establishments identified on approved supplier lists. Rosselkhoznadzor often issues conditions to source from approved establishments in the import (veterinary) permit. As a result, non-exempt commodities without a list of approved establishments (e.g., dairy) are routinely blocked from entry. Contrary to Russia’s WTO commitment to trim back the listing requirement to exclude select processed products of animal origin, Rosselkhoznadzor continues to de facto enforce the listing requirement on all such products.

Rosselkhoznadzor currently maintains such lists for the following U.S. commodities:

- Feed and Feed Additives
- Feed and Feed Additives: Feed for Non-Productive Animals, Bird, Fish
- Feed and Feed Additives: Feed Additives
- Feed and Feed Additives: Fishmeal
- Meat and Meat Products (NOTE: This list includes cold stores approved for all types of meats produced by approved establishments)
- Meat and Meat Products: Beef
- Meat and Meat Products: Poultry
- Meat and Meat Products: Pork
- Meat and Meat Products: Sub-products and Fat of Beef
- Meat and Meat Products: Sub-products and Fat of Poultry
- Meat and Meat Products: Sub-products and Fat of Pork
• **Non-Edible Products: Raw Intestines (Casings)**
• **Food Products: Finished Mutton Products**
• **Food Products: Finished Beef Products**
• **Food Products: Finished Horse Meat Products**
• **Food Products: Finished Poultry Products**
• **Food Products: Finished Pork Products**
• **Food Products: Prepared Meat Products**
• **Products Not Requiring a Permit: Feed and Feed Additives** (*This list includes all establishments that ship feeds in retail packaging, for which import permits are not required. The list was created by Rosselkhoznadzor primarily for the convenience of the EAEU customs officials at the border.*)
• **Fish and Seafood**

Establishments wishing to be added to the existing lists should contact the appropriate, competent U.S. authority:

- USDA/Food Safety and Inspection Service,
- USDA/Animal and Plant Health Inspection Service, or

The Eurasian Economic Union has indicated that it is “temporarily” exempting the following products from the listing requirement:

- Animals and genetic material;
- Bee products;
- Raw materials of animal origin (skin, hair, raw fur skins, feathers, etc.);
- Animal feed of vegetable origin;
- Food additives of animal origin;
- Composite (containing animal origin components) products; and,
- Gelatin, etc.

**Section VIII: Other Certification and Testing Requirements**

**Licensing**

*Tariff Rate Quotas (TRQs)*

In order to bring a product into the Russian Federation at the in-quota tariff rate for beef, pork, poultry, and whey, it is necessary for the importer to secure a license. Russia’s Ministry of Industry and Trade (MIT) issues this license. The MIT reviews license applications within 5 days of submission and then issues the licenses. Licenses are required per contract on an annual basis.

*Alcohol*
With Russia’s entry into the World Trade Organization on August 22, 2012, alcohol import licenses are no longer required.

However, a “wholesale/activity license” is required. The Federal Service for Regulation of the Alcohol Market issues wholesale/activity licenses for a maximum of five years. Since January 1, 2015, a state tax of 800,000 Rubles (approx. $11,900 as of December 2018) should be paid for issuance of an alcohol wholesale license. In order to obtain a wholesale license, the importer/distributor must meet requirements laid out in Russia’s national standards and the Technical Conditions for Storage of Alcohol (FSR Order No. 59n of October 26, 2010, as amended through November 30, 2012). All importers of alcohol products must have a wholesale license in order to obtain the necessary excise stamps and to produce or distribute and store alcoholic products.

**Excise Stamps**

**Alcohol**

The importer is responsible for marking imported alcohol products with excise stamps before the products enter the Russian Federation. Before receiving excise stamps, importers must receive a bank guarantee that shows that they have the funds available to pay for: excise stamps, VAT (that will increase from 18% to 20% as of January 1, 2019), customs duties, and excise duties. Since the strip stamp application process does not include information regarding the customs value, the Federal Customs Service determines the amount of the bank guarantee based on the type of product and volume to be imported. Then, the importer must provide for registration of the imported alcohol product in the UFAIS, as well as print data about the alcohol product on the excise stamps, procure such stamps, and attach them to the consumer packaging. The importer bears responsibility for the authenticity of the data as well as for the correctness of their placement on the excise stamps. However, the supplier is responsible for providing the importer with correct information. The following data are placed on the excise stamp, much of the data being provided by the exporter:

- Name of the alcoholic product;
- Type of alcoholic product;
- Ethyl alcohol content;
- Volume of the alcoholic product in consumer packaging;
- Name of producer of the alcoholic product;
- Producer’s location;
- Country of origin of the alcoholic product;
- Confirmation of correspondence of the established requirements of quality and safety;
- Confirmation of lawfulness of use on the alcoholic producer’s trademark, guarded in the Russian Federation; and
- Other data in accordance with Article 12 of Federal Law 171 On state regulation of production and handling of ethyl alcohol, alcoholic products and alcohol containing products.
The strip stamp requirement covers all alcohol products (except beer and “beer drinks”), including products with less than 9 percent alcohol by volume (abv).

**Products under sanitary-epidemiological control**

Declaration of Conformity

Pursuant to Russian Government Resolution No. 982, dated December 1, 2009, Russia began replacing the system of mandatory certification of conformity of major consumer goods, including imported food, alcohol, and cosmetics, with a system of declaration of conformity (for more information see GAIN report RS1015 Declaration of Conformity Replaced Certification for Many Products). The move was intended to ease the bureaucratic burden on businesses to allow producers to vouch for their goods based on their own verification.

Customs Union Commission Decision No. 319, of June 18, 2010, partially adopted some of Russia’s system for safety assessments, but still allowed for businesses to follow the guidelines of EAEU Member States, if they prefer. As a result, there is no official unified list covering all goods and products that are subject to mandatory safety assessment (confirmation) for the EAEU, so both a list approved by the CU Commission Decision 620, and a list approved by the Russian Government Resolution No. 982 (which is more extensive) should be consulted in order to determine whether a product is subject to mandatory safety assessment (confirmation).

Eventually, the plan is for technical regulations of the Eurasian Economic Union to replace the above two lists as the relevant EAEU technical regulations are developed and adopted to mandate declaration of conformity for these goods.

In particular, EAEU technical regulations for food products currently establish declaration of conformity procedures for almost all agricultural and food products, including fat-and-oil products, juice products, meat products, alcohol products, milk and dairy products, specialized dietary food products, fish, and potable water. For more information please see GAIN reports RS1343 Customs Union Food Technical Regulations in Force as of 1 July 2013, RS1382 Customs Union Technical Regulation on Milk and Dairy Products, RS1384 Customs Union Technical Regulation on Meat, RS1734 Technical Regulation on Safety of Fish and Fish Products, and RS1752 EAEU Technical Regulation on Packaged Water.

According to Russian Government Resolution No. 982, declaration of conformity is required for imports of the following agricultural and food products that are exported from the United States to Russia:

- Feeds of plant origin (by-products of sugar refining, starch and syrup production, oilseeds crushing, production of canned and dried vegetables, flour and cereals industry, alcohol and brewing production)
A similar list approved by the CU Commission Decision No. 620 currently requires a declaration of conformity for the following agricultural products:

- Animal, bird, and fish feed: compound feed and feed additives (e.g., soy meal, milk powder, fishmeal, etc.)

According to Russian Federal Law No. 184-FZ of December 27, 2002 (as amended), declarations of conformity for imported products shall be drawn up by Russian importers and registered with an accredited certification body in line with the procedures set forth by the Ministry of Economic Development in its order No. 752 of November 24, 2014 (as amended). The following documentation may be used by the importer as a basis for drawing up a declaration of conformity:

- Records of product testing carried out by the producer or importer and/or by a competent laboratory;
- Certificates of conformity or testing records on raw material or component parts;
- Documents required for this type of products (hygienic conclusions, veterinary certificates, certificates of fire safety, etc.);
- Certificates, confirming the system of quality, as well as other documents directly or indirectly assuring the conformity of products with the existing requirements.

Declarations of conformity are usually valid for 3 years and allow importers to mark products with a sign of conformity.

**Products under veterinary control**

Veterinary Health Certificate

Veterinary certificates are generally required for all products subject to veterinary control. Please consult the current FAIRS Export Certificate report for a list of individual certificates.

Export veterinary certificates are replaced at the border with Russian domestic veterinary certificates according to the procedure approved by the Order of the Ministry of Agriculture No. 589 of December 12, 2016, which also implemented Russia’s domestic e-certification program.

**Import Permits**

Permits are required for products subject to veterinary control, except for the following:
• Feed additives for dogs and cats, as well as prepared feeds for cats and dogs, heat-treated at the temperature not lower than +70° C for at least 20 minutes in consumer (manufacturer) packages;
• Hunting trophies accompanied by documents proving that they were purchased at retail and underwent the full taxidermy process.

Importers are responsible for applying to Rosselkhoznadzor for the necessary import permits. According to the Ministry of Agriculture Order No. 404 of November 7, 2011 (as amended through October 31, 2016), which regulates issuance of import permits, Rosselkhoznadzor is in charge of issuing two kinds of import permits:

• Individual import permits: valid for a calendar year and specify the foreign supplier, Russian importing company, volume of goods and border entry point.
• General import permits: valid for a calendar year and specify the exporting country, border entry points, and exporting establishments. Such permits cover an unlimited number of Russian importers and permit an unlimited volume. General import permits are issued by Rosselkhoznadzor annually, usually by November 10, for the upcoming year and can cover the following veterinary goods:
  - Ready-to-eat products of livestock origin in industrial packaging;
  - Food additives of animal origin;
  - Biological items for collection, properly treated to guarantee the destruction of agents of animal diseases;
  - Domestic and decorative animals imported as pets (up to 5); and,
  - Veterinary medicines duly registered in the Russian Federation.

In November 2018, Rosselkhoznadzor issued a list of 2019 general import permits for 54 countries, including three general import permits for the U.S. covering the following items:
1. Six types of biological items for collection including properly treated hunting trophies (from EAEU HS Codes 0507, 0511, 9601, and 9705);
2. Three to five head of cats and dogs as pets (from EAEU HS Code 0106); and,
3. Up to five domestic or decorative animals of 41 type (from EAEU HS Codes 0106, 0301, 0306, and 0307).

The only difference from 2018 in the above list is the reduction of species in item 3 above from 43 to 41 due to deletion of what appears to have been repetitive listing of rodents of EAEU HS Code 0106.

*Products under phytosanitary control*
CU Commission Decision No. 318 of June 18, 2010 (as amended through March 17, 2017) approved the “Regulation on the Procedure of Phytosanitary Quarantine Control (Supervision) at the Customs Border of the Customs Union” and the “Common List of Regulated Products (Materials, Commodities) Subject to Quarantine Phytosanitary Control.” The list divided products into two groups: regulated products of high phytosanitary risk and regulated products of low phytosanitary risk. Products of high phytosanitary risk require a phytosanitary certificate.

Since 2013, replacement phytosanitary certificates have been allowed in some cases under condition that the authorized agencies of exporting countries guarantee safety and wholesomeness of regulated products from the moment of its out-loading to the moment of the entry to the Customs Territory of the Customs Union (please see GAIN Report RS1389 Amended CU Regulations Allow Replacement Phytosanitary Certificates).

In late 2016, the EAEU adopted three key documents, Unified EAEU List of Quarantine Pests, Unified EAEU Phytosanitary Requirements, and Unified Rules and Norms to Ensure Plant Quarantine on the EAEU Territory, finally introducing unified phytosanitary requirements for all Member States as of July 1, 2017. For details please see GAIN reports RS1721 WTO Notifications on the EAEU Common List of Pests, RS1722 WTO Notifications on EAEU Phytosanitary Requirements, and RS1723 WTO Notification on EAEU Common Phytosanitary Rules.

In particular, the Unified EAEU List of Quarantine Pests replaced the national lists of quarantine objects (pests) of the individual EAEU member states, including that of Russia, as of July 1, 2017. However, on July 21, 2017, Rosselkhoznadzor released a notification that the EAEU List of Quarantine Pests does not contain 57 pests that are of quarantine concern specifically for the territory of the Russian Federation, and that Rosselkhoznadzor considers it necessary to add controls for these quarantine pests. This Rosselkhoznadzor requirement came to force on July 24, 2017; since that date, all regulated products that are imported to or moved in the territory of the Russian Federation are checked and controlled on the presence of quarantine pests that are in the Unified EAEU List of Quarantine Pests, plus 57 quarantine pests from the list added by Rosselkhoznadzor “as a temporary measure”. For details please see GAIN report RS1744 VPSS Adds to its List of Quarantine Pests for Russia.

In 2018, both the Unified EAEU List of Quarantine Pests and the Unified EAEU Phytosanitary Requirements were amended to include additional quarantine objects (pests) into the Unified List from the National Lists of the Russian Federation and the Republic of Kazakhstan. For details please see GAIN report RS1830 Eurasian Economic Union Ag Times No. 2 of 2018. As a result, 46 of the 57 pests from the Rosselkhoznadzor notification above are now covered by the Unified EAEU List and the Phytosanitary Requirements. However, the Rosselkhoznadzor notification still contains eleven additional pests that are relevant for Russia but not covered by the Unified EAEU Phytosanitary Requirements, and Russia’s related “temporary measure” is still in effect.
Additionally, the following Russian laws and regulations continue to apply to the extent they do not contradict the unified EAEU phytosanitary requirements. According to Russia’s Federal Law No. 206-FZ on Plant Quarantine of 2014 (please see GAIN report RS1451 Russian New Federal Law on Plant Quarantine), each batch of imported regulated products with high as well as with low phytosanitary risk is subject to quarantine and phytosanitary control at the border. The law also prohibits imports of regulated products into the RF for seeding or planting from foreign countries where the distribution of quarantine organisms typical for such regulated products has been found, except when the sites of growing and shipping of such regulated products are controlled and surveyed by the Russian federal quarantine authorities (Para 8 of Article 22 of the FL on Plant Quarantine). The FL 206-FZ authorized the Ministry of Agriculture and Rosselkhoznadzor to provide public access in Internet to all relevant information on quarantine and phytosanitary and quarantine status of the Russian Federation and quarantine measures taken by Rosselkhoznadzor.

The Order of the Ministry of Agriculture No. 456 of December 29, 2010 (as amended), approved the Russian phytosanitary requirements for imported regulated products. These Russian phytosanitary requirements are grouped by countries and by pests. For all countries Russia does not allow imports of grain and grain products infested with seeds of *Striga spp.*, which is considered by the Russian Ministry of Agriculture as an extreme risk for Russia and plant products infested with this weed are subject to disinfection or shall be destroyed. GAIN report RS1102 Russia Updates Quarantine Regulations of Imported Products provides detailed information on Order No. 456 and the list of quarantine objects that shall be controlled in products imported from the United States.

**Phytosanitary Certificates**

Imported products of low phytosanitary risk do not require a phytosanitary certificate issued by the exporting country, while high phytosanitary risk products require a phytosanitary certificate from the exporting country.

Phytosanitary certificates are issued for each lot of a product. A lot is a specified quantity (depending on the product) that meets the following requirements:

- the product was manufactured at one facility,
- the entire lot was manufactured during the same month, and
- the entire lot was transported in the same vehicle.

All of the above criteria must be met in order for a product to be described as a single lot. If, for example, products arrive in the same vehicle but were manufactured during different months, separate certificates and packaging descriptions will be assigned.

**Section IX: Import Procedures**
It is recommended that the importer, with the help of up-to-date information sources, check all import documents closely and ensure they do not violate Russian law and Russian agencies’ product-specific regulations, including rules that change due to EAEU development and WTO accession.

While the formation of the EAEU is ultimately expected to allow customs clearance of imported goods on the external border of the Eurasian Economic Union, currently, during a transitional period as defined by Article 449 of the EAEU Customs Code, the EAEU customs declaration is based on the “residency principle”, i.e. the applicant shall submit a customs declaration only to specific customs bodies of the country where the applicant is registered or permanently lives in the EAEU. The residency principle will apply until entry into force of a relevant international agreement between the EAEU Member States allows for the presentation of the goods declaration to any customs office in the EAEU.

Currently, goods that are supplied into Russia through Kazakhstan and Belarus are placed under the transit customs regime at the external border of the Eurasian Economic Union and are finally released for free circulation by the Russian customs authorities.

It is recommended that customs clearance be carried out by an agency located in the country where the customs clearance must be performed, or at least by a representative of this party in situ.

Import permits are issued in the name of physical or legal entities that are officially registered in the territory of the Russian Federation with the Russian tax authorities. Typically, a product’s exporter handles export customs-clearance and the product’s importer handles import customs-clearance.

**EAEU Classification of Commodities and Customs Tariff**

All imported commodities are classified in accordance with the Codes of the Customs Commodities’ Nomenclature of the Foreign Economic Activity of the Eurasian Economic Union. In 2018, the EEC continued adjusting the EAEU tariff schedule to reflect Russia’s WTO tariff commitments, with the majority of reduced tariffs for agricultural goods coming into effect as of September 1, 2018. (For more information on EAEU tariff reductions following Russia’s WTO accession please see GAIN reports RS1215 Market Opportunities for Key U.S. Products in Russia and RS1830 Eurasian Economic Union Ag Times No. 2 of 2018.)

The descriptions of the current edition of the Nomenclature and the EAEU Customs Tariff, as currently amended, can be found online at: [http://www.eurasiancommission.org/ru/act/trade/catr/ett/Pages/default.aspx](http://www.eurasiancommission.org/ru/act/trade/catr/ett/Pages/default.aspx). The EAEU codes are similar, but not identical to the U.S. Customs Service Harmonized Code numbers. As of January 1, 2017, the EAEU Commodity Codes were updated to reflect the HS Nomenclature 2017 Edition.

**Customs Payments**
Customs duties, fees, and the value-added tax (VAT) are usually paid in advance to avoid delays in customs clearance. Customs duties, payments, and taxes depend on the type of product and are calculated based on the customs value of the product. The customs value of goods imported into the EAEU, which is used as a basis for calculation of the import custom duties and taxes, includes the cost of goods, insurance costs, and costs of transportation of the goods to the customs border. Depending on the actual circumstances, including contractual arrangements, an importer may, in addition, have to include royalties (payable for the right to use trademarks and other IP rights in order to resell the goods) or other income into the customs value of those goods, provided that the importer must directly or indirectly (e.g., via third parties) pay those royalties, other license fees and/or other income as a direct consequence of importation of the goods being valued at customs.

Traders should use the EAEU Customs Tariff and the Russian Tax Code to calculate customs duties and fees. Customs duties, fees, and payments are calculated based on rates from the customs value of the goods and are assigned while developing the consignment’s customs declaration. Tariff rates are subject to change, so importers and exporters should monitor amendments to the tariff schedule. Customs clearance fees are established by the Russian Government Decree No. 863 of December 28, 2004 (as amended through December 12, 2012). As of the date of Russia’s WTO accession, Decree No. 863 was amended to cut maximum customs clearance fee from 100,000 rubles (approx. $1,500 as of December 2018) to 30,000 rubles (approx. $450 as of December 2018).

Approximately three days before the shipment is due to arrive; the importer must transfer money into a designated bank deposit to pay for customs fees and taxes based on the shipment’s value.

**Customs Clearance**

Customs clearance usually occurs at the point of destination and typically takes between 2 and 4 days. In Russia, imported goods may not be legally released for free circulation until the customs authority authorizes the delivery (entry) of the goods into mainland Russian territory, confirmed by a special (“vypusk razreshyon” - release granted) stamp of the customs authorities placed on the customs declaration. Imported goods are normally cleared at customs either before their shipment to Russian customs territory or at the time the goods reach the designated customs house/post (and are placed in a special temporary customs warehouse, if needed).

Customs clearance is normally completed by the importer who files the appropriate documents. The main document required for customs clearance is the customs declaration, which should be filed by the importer (or a customs agent acting on its behalf). The importer is also, generally, required to submit the following documents:

- Documents confirming the authority of an entity or individual(s) to represent the importer/exporter before the customs authorities (e.g., customs broker agreement or power of attorney);
• Documents confirming the legal capacity of the entities, data on which is indicated in the customs cargo declaration, to operate on Russian territory (e.g., statutory documents, the accreditation certificate of the branch or representative office of a legal entity, the passport (ID) of an individual, the state registration certificate of a legal entity or individual entrepreneur, etc.);

• Relevant tax registration documents of such entities;

• Supporting documentation with respect to the declared customs value of the goods (e.g., foreign trade contract, payment documentation, exporter’s official price lists, etc.);

• A foreign-trade contract and/or other commercial documents relevant to the products being declared, as required for the selected customs regime (e.g., commercial invoice from the supplier/exporter, shipping documentation, e.g. for sea transportation – the Bill of Lading, for vehicle transportation - CMR);

• A “transaction passport” for the foreign-trade contract, which is a currency control document issued by the importer’s Russian bank (the Russian importer would have to provide the supply contract with its foreign supplier to its local bank for the purposes of opening and registering the “transaction passport”);

• Documents proving the right to apply tariff preferences or tax benefits, if any;

• A country of origin certificate;

• A certificate of conformity, declaration of conformity, sanitary registration certificate;

• Supporting payment documents proving that the relevant customs payments have been made (e.g., cash payment orders, other payment documentation);

• Documents proving the provision of security for making customs payments; other guarantees, if required (if customs payments have been made in full for the customs clearance of imported products, this provision would not be applicable);

• Transportation documents for international carriage of goods;

• A phytosanitary certificate and/or veterinary health certificate, if applicable; and,

• Other certificates and licenses, if required.

These documents must be issued in the name of the importer and must be in the Russian language. The above is a general list of the documents required for the customs clearance of goods under any customs regime declared for importation into Russia; the list of the required documents may be expanded for a given customs regime. At the request of the customs authorities, the importer should also present additional documents relevant to the importation at issue.

By law, the customs clearance of goods in Russia should be performed within one day after the importer has submitted, and the Russian customs authorities have accepted, all the required documentation. However, because the customs authorities control the moment when this term starts, in practice the customs clearance process may take longer than the statutory term.

According to the Customs Code of the EAEU, the customs clearance of goods is shortened to just one day after receipt of the customs declaration (under the Russian Customs Code the goods should have
been cleared within 3 days). At the same time, the legislation provides for the right of a customs inspector to extend that term by up to ten days at his/her discretion.

Pre-Arrival Submission for Automobile/Rail/Air Shipments

CU Commission Decision No. 899 of December 9, 2011, mandates a pre-arrival submission of information about goods imported into the EAEU customs territory by automobile transport two hours prior to the good’s arrival. The decision came into force on June 17, 2012, but should be replaced by an updated version of the requirement per EEC Collegium Decision No. 56 of April 17, 2018, as of July 1, 2019.

The scope of a pre-arrival submission is as follows:

- The sender, recipient of the goods in accordance with the transportation (shipment) documents; their names and addresses;
- The seller and the buyers of the goods in accordance with the commercial documents of the carrier;
- Country of origin, country of destination;
- The declarant;
- The carrier, its name and address;
- The vehicle of international transport that carried the goods, or its state registration;
- The name, quantity, value of goods in accordance with the commercial, transportation (shipment) documents;
- Code of the goods in accordance with the Harmonized Commodity Description and Coding System or the Nomenclature of Foreign Economic Activity of the Eurasian Economic Union for at least the first six digits;
- Gross weight or volume of goods, as well as the quantity of goods in additional units (if such information is available) for each code of the Nomenclature for Foreign Economic Affairs of the Eurasian Economic Union or the Harmonized Commodity Description and Coding System;
- The number of packages; their labeling and types of packaging;
- The destination of the goods in accordance with the transportation (shipment) documents;
- Documents confirming compliance with the restrictions associated with the movement of goods across the customs border of the Eurasian Economic Union, if such movement is permitted;
- Planned transshipment of goods or cargo operations in a way;
- Time and place of arrival of goods into the customs territory of the Eurasian Economic Union.
- Availability of goods whose import into the customs territory of prohibited or restricted;
- Place and date of drawing up international commodity transport bill of lading.

According to the EEC Collegium Decision No. 196 of September 17, 2013, as of October 1, 2014, pre-arrival submission of information about goods imported into the EAEU customs territory via railway is
required two to four hours prior to the good’s arrival. For details, please see GAIN reports RS1349 Draft CU Pre-Notification Requirement for Imports by Rail and RS1368 Customs Union Ag Times No. 15. Similar to the regulation above regarding imports by automobile transport, Decision 196 is due to be replaced by an updated version of the requirement per EEC Collegium Decision No. 57 of April 17, 2018, as of July 1, 2019.

Pre-arrival submission of information about goods imported into the EAEU customs territory by air has been required since April 1, 2017, according to the EEC Collegium Decision No. 158 of December 1, 2015. The requirement will also be updated as of July 1, 2019, per EEC Collegium Decision No. 62 of April 24, 2018.

Finally, EEC Collegium Decision No. 51 of April 10, 2018, will introduce a pre-arrival submission of information about goods imported into the EAEU customs territory by water transport no later than six hours prior to the good’s arrival as of July 1, 2019.

**Typical Errors When Supplying Foodstuffs to Russia**

Listed below are the Russian authorities’ most common reasons for prohibiting or suspending suppliers’ imports of controlled products to Russia:

- Documentary discrepancies (e.g. incorrect veterinary certificate; incorrect information in the veterinary certificate, including incorrect name of products or facilities, incorrect vehicle or facility or seal number, incorrect dates of production, incorrect number of packages or weight, missing facility information, missing stamp or signature of the approving veterinarian, unendorsed amendments in the veterinary certificate);
- Absence of an import permit;
- Imports from uncertified (unapproved) or restricted facilities;
- Missing original veterinary certificate (products are accompanied only by a copy of the veterinary certificate);
- Absence (non-conformity) of labeling; and,
- Non-conformity with sanitary-hygienic requirements.

Sometimes imports are detained because importers (legal entities, individual entrepreneurs) do not request official information from the producer about the safety of the product, including the use of pesticides, the contracts signed to supply the food products do not spell out the requirements for labels in the Russian language; and/or how potentially dangerous products can be returned to the supplier. Other problems include price discrepancies and/or failure to pay fees.

Exporters should be prepared for requests for the following documents from importers:
• For food materials of plant origin – information about pesticides used when growing the plants, fumigation of the premises, storage methods for pest control, etc.;
• For food materials of animal origin – information about the use of veterinary preparations indicating the name and the withdrawal period;
• Documents confirming the quality and safety of products for human consumption; and,
• Consignment layout showing how the transportation vehicle was loaded (e.g., on pallets).

Section X: Copyright and/or Trademark Laws

Russian intellectual property (IP) legislation consists for the most part of the Civil Code of the Russian Federation, specifically Part Four (“Part IV of the Civil Code”) put into force in 2008 by Federal Laws No. 230-FZ and No. 231-FZ, dated December 18, 2006. Part IV of the Civil Code represents a codification of pre-existing IP laws, which have been compiled as respective chapters in Part IV of the Civil Code, partially unaltered, with just certain instances where significant amendments have been made. Parts I-III of the Russian Civil Code also set out certain general provisions pertaining to legal protection of IP rights. Part IV covers a broad range of IP-related goods and activities, which are subject to the same principles of protection and sanctions in the case of infringement in compliance with international treaties and practices, in particular the WTO Trade-Related Intellectual Property Agreement (TRIPS).

Any foreign legal entity or individual may seek protection for its/his/her intellectual property rights in Russia, if the requirements of the law are satisfied. Russia is a signatory to major international treaties on intellectual property rights, including the Universal Copyright Convention, the Paris Convention for the Protection of Industrial Property, the Madrid Agreement on the International Registration of Trademarks, the Protocol to the Madrid Agreement, the Singapore Treaty on the Law of Trademarks, and the World Intellectual Property Organization (WIPO) Copyright Treaty.

Chapter 76 of Part IV of the Civil Code governs trademarks. The provisions regulate registration and protection of trademarks (including well-known marks), service marks, firm names, and appellation of origin/geographical indications. Infringement of rights to a trademark, service mark or appellation of origin of goods may entail civil, administrative or criminal liability.

Trademarks and Service Marks

Under Part IV of the Russian Civil Code, trademarks (service marks) are designations individualizing goods or services of legal persons and individual entrepreneurs. Legal protection of trademarks and service marks is granted by virtue of their registration with Russia’s Federal Service for Intellectual Property (Rospatent) or by virtue of international registration under the international agreements to which the Russian Federation is a party. A mark may be represented by a word or words, pictures, three-dimensional signs, and other designations or combinations thereof. A trademark may be registered in any color or color combination.
Trademark and service mark protection is granted for ten years from the filing date of the application, and may be renewed during the last year of its validity for a subsequent ten-year period. Trademark and service mark registration is cancelled if its term expires without having been renewed. Trademark and service mark legal protection may be terminated upon a request from an interested party with respect to all or part of the respective goods and services due to non-use of the trademark or service mark during any continuous three-year period counted from the registration date. Assignments and licenses of trademarks and service marks must be registered with Rospatent. In the absence of such registration, they are deemed null and void.

**Appellation of Origin of Goods**

An appellation of origin of goods is a name constituting or containing a current or historical denomination of a country, settlement, locality or other geographic unit (hereinafter referred to as a “geographic unit”) or a derivative of such denomination that has become known as a result of its use with respect to goods the specific features of which are mainly or exclusively determined by natural conditions or human factors which are characteristic of such geographic unit. A designation which, through representing or containing the name of a geographic unit, has entered in the Russian Federation into the public domain as a designation of goods of a certain type (has become generic) not connected with the place of production thereof shall not be recognized as the appellation of the origin of those goods.

Legal protection is given to an appellation of origin of goods based on its registration with Rospatent. An appellation of origin of goods may be registered in the name of one or more persons. The person or persons that have duly registered an appellation of origin of goods obtain the right to use such appellation, if the goods manufactured by such person(s) satisfy the criteria mentioned above. The right to use an appellation of origin of goods may be granted to any legal entity or individual, which produces goods with the same specific features within the same territory. The term of protection is granted for ten years from the date of filing the application, and may be renewed for a subsequent ten-year period. The owner may not grant licenses for use of the appellation of origin of goods.
Appendix I: Key Government Regulatory Agency Contacts

1. Federal Service for Veterinary and Phytosanitary Surveillance (Rosselkhoznadzor)
   107139, Moscow, Orlikov per., 1/11
