Sunflower Update

Report Categories:

Oilseeds and Products

Approved By:

Robin Gray, Agricultural Attaché

Prepared By:

Denys Sobolev, Agricultural Specialist

Report Highlights:

This report contains revised production, consumption and trade forecasts for MY2018/19 as well as updated production and trade estimates for MY2017/18.

Production

For a more comprehensive outlook of the Ukrainian oilseeds market, please refer to our [Annual Oilseeds Report](#). This report focuses solely on FAS Kyiv changes to forecasted production and processing of sunflower seeds and products of processing thereof (i.e. sunflower oil and meal) for MY2018/19, and updates to production and trade estimates for MY2017/18, based on data available to date.

As of December 11, 2018, the Ministry of Agricultural Policy and Food of Ukraine (MAPF) reported MY2018/19 harvested sunflower area around 6049 thousand hectares (ha), resulting in nearly 14 million metric tons (MMT). This volume is approximately 15 percent higher than the official MAPF-reported harvest for MY 2017/18. This increased in production is largely attributable to weather conditions. In 2017, there were serious draught conditions while in 2018 the weather conditions were favorable toward spring crops.

Based on these revised official data, FAS Kyiv estimates the sunflower production volume at 15.8 MMT for MY2018/19. Based on the MY2017/18 trade numbers (please refer to Author Defined section) both for sunflower seeds and products of processing thereof (i.e. sunflower oil and meal), FAS Kyiv increased its MY2017/18 sunflower estimate to 13.7 MMT. For explanatory notice about the discrepancy between official numbers and FAS Kyiv’s forecasts please refer to page five of our [Annual Oilseeds Report](#).

Production volumes of both sunflower oil and meal are directly related to the volume of sunflower seed. Ukraine does not import substantial volumes of either sunflower seed (except for certified seeds for planting), or crushed products (i.e. oil and meal). Almost all seed grown in Ukraine is crushed domestically. Ukraine has excess crushing capacity, making it advantageous to crush all seed at home. Additionally, there is a ten percent export duty on sunflower seeds, which makes exporting less attractive compared with crushing domestically. For more information about taxation, please refer to the Policy section of our [Annual Oilseeds Report](#). MY2018/19 oil content in kernels is expected to be higher than the oil content was in MY2017/18, based on industry reports. Post’s increase in sunflower oil production estimate for MY2018/19 is based on these reports.

Consumption

Revised FAS Kyiv production estimates for both MY2018/19 and MY2017/18 translate into increased crush numbers for sunflower seed compared to our previous estimates. Almost 100 percent of seeds is processed in country, as noted in the “Production” section, above. Please refer to our [Annual Oilseeds Report](#) for more details.

FAS Kyiv MY2018/19 forecast for sunflower oil food consumption is lower compared to MY2017/18 estimate due to expected further decrease of population numbers as the result of continued migration out of Ukraine in 2019.

FAS Kyiv increased the MY2017/18 sunflower meal feed consumption estimate compared to the MY2016/17 sunflower meal feed consumption, to reflect the growing popularity of sunflower meal as part of feed ratios for the poultry industry. Moreover, data from the State Statistics Service of Ukraine indicates that poultry numbers grew by four percent, year-on-year, as of December 1, 2018. FAS Kyiv projects further growth in the Ukrainian poultry sector in 2018, Post has mirrored these two trends in its increase of the sunflower meal feed consumption forecast for MY2018/19.

Trade

MY2017/18 trade estimates have been revised in accordance with the latest export/import data included in Author Defined section.

MY2017/18 sunflower oil exports decreased by almost nine percent compared to the previous MY as the result of lower sunflower production numbers (see Production section for more details). In MY2017/18 there been redirection of oil exports to India (around 20-percent increase compared to the previous MY), which was done through decreased shipments to the EU (20-percent decrease) as well as through decreased exports to East and Southeast Asia, Africa and Middle East.

MY2017/18 sunflower meal exports decreased by around 12 percent compared to the previous MY. This was the result of 14-percent decrease of exports to the EU (the single largest consumer) as well as around 29-percent decrease of shipments to Middle East and 10-percent decrease of exports to Africa. At the same time, MY2017/18 shipments East and Southeast Asia (predominantly Vietnam and Thailand) increased 3.1-fold compared to the previous MY.

Production, Supply and Distribution Data Statistics

Sunflower Seed

Post's sunflower seed production forecast is approximately five percent higher than USDA's official data for MY2018/19, based on arguments discussed in Production section.

Post's sunflower seed import forecast is around 25 percent higher than USDA's official data for MY2018/19, based on assumption for relatively unchanged sunflower planted area in 2019.

Post's sunflower seed crush forecast is around eight percent higher than USDA's official data for MY2018/19, based on Post's revised forecasted production number.

Sunflower Oil

Post's sunflower oil production forecast is around nine percent higher than USDA's official data for MY2018/19, based on Post's increased sunflower seed production forecast.

Post's sunflower oil export forecast is 11 percent higher than USDA's official data for MY2018/19, based on Post's increased production forecast.

Post’s sunflower oil food use forecast is three percent lower than USDA’s official data for MY2018/19, based on rationale discussed in Production section.

Sunflower Meal

Post’s sunflower meal production forecast is nearly seven percent higher than USDA’s official data for MY2018/19, based on Post’s increased sunflower seed production forecast.

Post’s sunflower meal export forecast is 13 percent higher than USDA’s official data for MY2018/19, based on Post’s increased production forecast.

Post’s sunflower meal feed waste estimate is six percent higher than USDA’s official data for MY2017/18, based on increased poultry numbers discussed in Consumption section.
